### 1.0 INTRODUCTION

This appendix provides a summary of the baseline data collected in support of the human health assessment conducted as part of the overall Environmental Assessment Certificate Application/Environmental Impact Statement (hereafter referred to as the EA) for the Proposed BURNCO Aggregate Project (the Proposed Project). A baseline sampling program that included both terrestrial and aquatic components was conducted for the Proposed Project. The terrestrial component (soil and vegetation sampling) was conducted in August 2013, and the aquatic component (crab, mussel, and fish tissue sampling) was conducted in December 2013. The Proposed Project site is located within the Lower McNab Valley, situated on the north shore of Howe Sound, BC, approximately 22 km west-southwest of Squamish, BC, and 35 km northwest of Vancouver, BC. The Proposed Project proponent is BURNCO Rock Products Ltd. (BURNCO).

The purpose of the sampling program was to provide site-specific chemistry results that will be used to determine baseline exposure concentrations and calculate site-specific bioaccumulation factors as a part of the public health assessment. The terrestrial baseline sampling program targeted the collection of berries and sea asparagus, along with co-located soil samples. The aquatic baseline sampling program targeted the collection of crab and mussels in the marine environment (Howe Sound) and fish in the freshwater environment (McNab Creek). Berries, sea asparagus, crab, mussels and freshwater fish were targeted for collection as these country foods are consumed by people in the area.

The terrestrial and aquatic baseline sampling programs was developed to be consistent with a country foods guidance document prepared for Health Canada (Golder Associates Ltd. [Golder] 2005).

### 2.0 FIELD SAMPLING AND ANALYSIS METHODS

#### 2.1 Terrestrial Baseline Sampling

The terrestrial baseline sampling program targeted the collection of edible berries and sea asparagus as they are consumed by people in the area. Sea asparagus could not be located around the site, therefore only berries were collected with co-located soil samples.

Nine (9) sites located within and outside of the Proposed Project area were selected for berry and soil sampling. Sampling was conducted August 19, 2013 by Golder field personnel and sampling locations were accessed on foot.

## BASELINE DATA COLLECTION AND RESULTS

The locations of the soil and vegetation samples are provided in Table 9.1-A-1 and shown on Figures 9.1-A-1 and 2.

**Table 9.1-A-1: Soil and Berry Sample Locations**

| Location  | Coordinates (UTM 10) |          | Elevation (masl) |
|-----------|----------------------|----------|------------------|
|           | Easting              | Northing |                  |
| 13-BRP-01 | 472157               | 5490389  | 6                |
| 13-BRP-02 | 472128               | 5490444  | 7                |
| 13-BRP-03 | 471940               | 5490529  | 9                |
| 13-BRP-04 | 471955               | 5490753  | 9                |
| 13-BRP-05 | 471951               | 5490397  | 7                |
| 13-BRP-06 | 472454               | 5490133  | 1                |
| 13-BRP-07 | 471762               | 5490244  | 7                |
| 13-BRP-08 | 471518               | 5491144  | 20               |
| 13-BRP-09 | 471284               | 5489725  | 27               |

Notes:

masl = metres above sea level; UTM = Universal Transverse Mercator.

## BASELINE DATA COLLECTION AND RESULTS

Table 9.1-A-2 summarizes the sample IDs, the type of berries and soil collected, and the surrounding growing environment.

**Table 9.1-A-2: Terrestrial Baseline Sampling Program Summary Table**

| Berry       | Soil        | Berry Sample Type                              | Soil Depth (cm) | Soil Type           | Growing Environment (%) |        |       |             |                  |
|-------------|-------------|--|-----------------|---------------------|-------------------------|--------|-------|-------------|------------------|

Notes:

“-“ = not recorded; % = percent; cm = centimeter.

### 2.1.1 Sampling Methods

At each collection site, the following sampling methods were undertaken:

- Photographs were taken including: the surrounding area and ground cover; soil in the sample jar, the berry sample in the collection bag; and, the entire plant including leaves and branches (see photographs 1 to 10, Attachment 1);
- Surficial soil samples (i.e., top 15 centimetres (cm)) were collected at the base of the plant sampled for berries using a stainless steel trowel, removing the top layer of litter/fibre and humus. The collected soils were placed in a stainless steel bowl and mixed to create a homogenous sample. The soil sample was then placed in clean, labelled glass jars. Samples were stored on ice in a cooler and transported to the lab for analysis;
- Berry samples were handpicked while wearing nitrile gloves, avoiding the inclusion of any soil or debris. Berry samples were placed in clean, labelled ziploc bags, and were placed on ice in coolers until they could be frozen. Frozen vegetation samples were then submitted to the lab for analysis; and
- A plant and soil identification form was conducted at each site and included date, sample #, photo numbers, location, growing environment, vegetation type, soil type, soil depth, and field notes.

The following quality assurance measures were taken:

- Cross-contamination during sample collection was minimized by wearing disposable nitrile gloves, which were changed between each sample. Stainless steel equipment (i.e., trowels) were washed with decontamination soap and rinsed with distilled water between sample collection sites.
- One duplicate berry and soil sample was collected for quality assurance/quality control (QA/QC).
- Samples were placed on ice in a cooler immediately upon collection and were kept cool until submitted to the lab for analysis.
- One duplicate berry and one duplicate soil sample were collected 13-BRP-B-07 to assess reproducibility (see Section 3.2).

### 2.1.2 Analysis Methods

Soil and berry samples were submitted to ALS Environmental (ALS; Burnaby, BC) for chemistry analysis.

Berry samples (9 plus 1 duplicate sample) were analyzed for:

- Moisture (analysis carried out gravimetrically by drying the sample); and
- Metals in tissue (high resolution inductively coupled plasma mass spectrometry [HR-ICPMS] and inductively coupled plasma – optical emissions spectrophotometry [ICPOES]) including silver (HR-ICPMS) and mercury (cold vapour atomic fluorescence spectrophotometry [CVAFS]).

Soil samples (9 plus 1 duplicate sample) were analyzed for:

- pH (1:2 H<sub>2</sub>O extract); and
- Metals in soil (HR-ICPMS), including mercury (CVAFS).

Metals concentrations in soil samples are screened against applicable environmental quality guidelines and are presented in Appendix 9.1-C. There are no standards or guidelines available against which to screen concentrations of metals in berry tissue, however, screening of soil is considered to be a conservative surrogate for expected changes in concentrations of chemicals of potential concern in berries as uptake from soil into berries is considered a primary fate and transport pathway.

## 2.2 Aquatic Baseline Sampling

The aquatic baseline sampling program targeted collection of Dungeness crab, Pacific Blue mussels and salmon as these items are consumed by people in the area.

Crab and mussel samples were collected from two (2) locations in Howe Sound; along the foreshore of the Proposed Project area and at Camp Potlatch, a reference location located on the north shoreline of Howe Sound approximately 7 km east of the Proposed Project area. The three (3) mussel samples collected at the Proposed Project area on August 17, 2012 were obtained while diving. The two (2) mussel samples collected at Camp Potlatch on September 12, 2012 were obtained during a foot survey. The remainder of the samples were collected on December 5, 2013 by Golder field personnel and sampling locations were accessed by boat.

Four (4) locations on McNab Creek were selected for fish sampling. Sampling was conducted on December 9 2013 by Golder field personnel and sampling locations were accessed on foot. A single fish was caught by angling at one of the four locations where collection was attempted.

## BASELINE DATA COLLECTION AND RESULTS

The locations of the crab, mussel and fish sampling are provided in Table 9.1-A-3 and shown on Figure 9.1-A-1, 9.1-A-2 and 9.1-A-3.

**Table 9.1-A-3: Crab, Mussel and Fish Sample Locations**

| Location                                      | Sample ID                 | Coordinates (UTM 10) |          |

| Fish Site #4                                  | No fish caught            | 472112               | 5490989  |

Notes:

<sup>1</sup> Coordinates presented represent the start and endpoints of a stretch of beach from which mussel samples were collected.

<sup>2</sup> Approximate sample location.

ONCL = *O. clarkii clarkii* (Coastal Cut-throat trout); UTM = Universal Transverse Mercator

### 2.2.1 Sampling Methods

Crab were collected by placing baited crab traps at the sampling locations for 24-48 hours and then retrieving them. Fish carcasses were used as bait. A separate cooler was labeled for each of the Sites (i.e., a total of 2 coolers) and crab were transferred to the appropriate cooler. Ice in each of the coolers was used to slow movement of the crabs for transport. The crab were put into the freezer immediately upon submission to the laboratory.

Mussel samples were collected from exposed rocks or pilings along the foreshore area at both the Proposed Project area site (samples labelled "McNab Creek") (13 samples) and Camp Potlatch (10 samples). Each sample consisted of approximately five mussels that were transferred to labeled plastic collection bags and placed on ice in coolers until submission to the laboratory. A duplicate mussel sample was collected at each of the two areas (Camp Potlatch and McNab Creek). The duplicate was a separate sample of mussels collected from the same rock or piling as the original sample.

Fish sampling was conducted using a combination of gill nets and angling. The fish was transferred to a labelled plastic collection bag and placed on ice in a cooler until submission to the laboratory. Species, length, weight, sex (if possible), life stage (if possible), and external condition was recorded.

### 2.2.2 Analysis Methods

Crab, mussel and fish samples were submitted to ALS for chemical analysis. The lab attempted to extract the hepatopancreas from each of the crabs by dissection; however, due to degradation from the freeze and thaw process, the hepatopancreas could not be confidently extracted. For this reason, all internal organs were extracted and composited for analysis. A separate sample of muscle tissue was also extracted. Mussels were shucked at the lab; the tissue was extracted from each mussel in a sample and was composited before analysis.

Crab, mussel and fish tissue samples were analyzed for:

- Moisture (analysis carried out gravimetrically by drying the sample); and
- Metals in tissue (HR-ICPMS and ICPOES) including silver (HR-ICPMS) and mercury (CVAFS).

Metal concentrations in tissue samples are screened against applicable environmental quality guidelines and are presented in Attachment 1 of Appendix 9.1-C.

## 2.3 Quality Assurance/Quality Control

### 2.3.1 Field

For field QA/QC purposes, duplicate sample of berries, soil and mussels were collected with approximately 10% frequency. The duplicate site was selected randomly and based on sample medium availability during the field program. Sample duplicates are collected to provide an indication of natural sample variation and the reproducibility results from within the same sample plot or plant. For soil, the duplicate was a sample that was blended and divided into two equal portions, each of which is analyzed in exactly the same manner. For berries and mussels, it involved collection of a separate sample of the same tissue type from the same location.

The results of the duplicate pair are often expressed as relative percent difference (RPD). The RPD is an indicator of sample heterogeneity. Lower RPD numbers indicate that samples are homogeneous. The formula for computing the RPD is given below:

$$RPD = \frac{abs (Sample - Dup)}{Mean} \times 100$$

Where:

- RPD is the relative percent difference;
- abs(Sample - Dup) is the absolute value of the original sample minus the duplicate sample; and
- Mean is the average of the two samples.

RPDs were not calculated if concentrations were not detected in one or both of the two replicate samples.

When detected concentrations are less than five times the detection limit, a difference factor (DF) is calculated according to the following formula:

$$DF = \frac{abs (Sample - Dup)}{Method\ Detection\ Limit}$$

Where:

- DF is the difference factor;
- abs(Sample - Dup) is the absolute value of the original sample minus the duplicate sample; and
- Method Detection Limit is the smaller of the two detection limits.

Variability in sample results can be introduced in the field and laboratory. Generally, higher variability is accepted from field duplicates compared to laboratory duplicates. Field duplicate variability of 30% to 50% (RPD) is common for soil, and could also be expected for berries and mussels, although because the berry and mussel duplicates are not true “split” samples, variability could also be higher. Laboratory duplicate variability is generally less than field duplicate variability since fewer steps are involved and RPDs of 20% may be expected.

A QA/QC RPD criterion of 35% and DF criterion of 2.0 was applied to identify soil, berry and mussel duplicates with higher than expected variability. Duplicate samples that have larger variation indicate high sample variability, which can be attributed to sampling technique or natural sample heterogeneity.

Specific procedures were followed in the field during the collection of duplicate soil samples (i.e., sample homogenization) to reduce the effect of sampling techniques on variability. For berries and mussels, duplicate samples were separate berries or mussels collected at the same location.

### 2.3.2 Laboratory

In addition to field duplicate QA/QC procedures, analyses conducted by ALS followed appropriate laboratory QA/QC procedures. Each analytical method and standard sample has control limits that must be met to verify the results for both the standard materials and the unknown samples submitted. The results of the laboratory QA were reported with each laboratory data summary report. Laboratory QA/QC included analysis of method blanks, laboratory control samples, matrix spikes, and reference materials to assess precision and accuracy of analyses. All laboratory duplicate samples were analyzed for the full suite of analytes listed in Sections 2.1.2 and 2.2.2. Laboratory data QA/QC reports were reviewed upon receipt to confirm that the laboratory data quality objectives (DQOs) had been met and that the appropriate QA/QC information had been reported.

## 3.0 RESULTS

### 3.1 Analytical Results

#### 3.1.1 Soil

Laboratory analytical results for the soil samples are presented in Attachment 2 and analytical results are presented in Table 9.1-A-4 at the end of this section.

Tin was the only metal not detected in any soil sample. The following metals were detected in one or more samples of soil with a detection frequency of 10 to 80%: beryllium, bismuth, lithium, selenium, silver, and thallium. The remaining metals were detected at frequencies higher than 80%.

Baseline soil concentrations have also been screened against applicable soil screening values for informational purposes and are presented in Table 1 of Attachment 1 of Appendix 9.1-C.

### 3.1.2 Berries

Laboratory analytical results for the berry samples are attached to this Appendix and results are presented in Table 9.1-A-5.

The following metals were detected in one or more samples of berries with a detection frequency of 10 to 80%: arsenic, cadmium, chromium, cobalt, lead, and mercury. Metals that were not detected in any of the berry samples collected included antimony, beryllium, bismuth, gallium, lithium, rhenium, selenium, silver, sodium, tellurium, thallium, thorium, uranium, vanadium, yttrium, and zirconium. The remaining metals were detected at frequencies higher than 80%.

### 3.1.3 Crab

Laboratory analytical results for crab muscle and organ tissue samples are attached to this Appendix and results are presented in Table 9.1-A-6.

Metals that were not detected in any of the crab samples analyzed included beryllium, rhenium, tellurium, and zirconium. The following metals were detected in one or more samples of crab with a detection frequency of 3 to 80%: antimony, bismuth, chromium, gallium, lead, thallium, thorium, tin, vanadium, and yttrium. The remaining metals were detected at frequencies higher than 80%.

### 3.1.4 Mussel

Laboratory analytical results for mussel samples are attached to this Appendix and results are presented in Table 9.1-A-7.

The following metals were detected in one or more samples of mussels with a detection frequency of 6 to 77%: antimony, beryllium, thallium, tin, and zirconium. Bismuth, rhenium and tellurium were not detected in any of the mussel samples analyzed. Polycyclic aromatic hydrocarbons were not detected in the samples analyzed.

### 3.1.5 Fish

Laboratory analytical results for a cutthroat trout sample are attached to this appendix and results are presented in Table 9.1-A-8.

Metals not detected in the fish sample included beryllium, bismuth, boron, gallium, lithium, rhenium, tellurium, thorium, tin, uranium, yttrium, and zirconium. The remaining metals were detected in the fish sample.

## **3.2 Quality Assurance/Quality Control Results**

### **3.2.1 Field**

#### **3.2.1.1 *Soil Duplicate Quality Assurance/Quality Control***

Duplicate soil samples were collected at 13-BRP-S-07 for metals. The results for the duplicate soil samples for metal analysis are shown in Table 9.1-A-9. RPDs of all metal parameters were below the guideline of 35%, except for uranium (47%), and DFs of all applicable metal parameters were below the guideline of 2. This suggests general similarity between the soil duplicates at this location.

#### **3.2.1.2 *Berry Duplicate Quality Assurance/Quality Control***

The QA/QC duplicate samples results for metal concentrations in berries collected at 13-BRP-B-07 are presented in Table 9.1-A-10. RPDs and DFs of all the metal parameters analyzed were below the guidelines of 35% and 2, respectively and this suggests there is little degree of metals heterogeneity in berries at this location.

#### **3.2.1.3 *Mussel Duplicate Quality Assurance/Quality Control***

The QA/QC duplicate samples results for metal concentrations in mussel samples collected at CP MUSSEL-TS-1 of Camp Potlatch and MCNAB MUSSEL-TS-1 of the Proposed Project area foreshore are presented in Table 9.1-A-11. RPDs were greater than 35% for moisture, barium, calcium, cesium, iron, lead, manganese, strontium, and vanadium at CP MUSSEL-TS-1 and for chromium, cobalt, lead, molybdenum, uranium, and vanadium at MCNAB MUSSEL-TS-1. DFs were greater than 2 for gallium and tin at CP MUSSEL-TS-1. RPDs and DFs for the other metals analyzed were below the respective acceptance limit of 35% and 2.

These duplicate results suggest there is some degree of metals heterogeneity in the mussels at both the Proposed Project site and Camp Potlatch (the reference site). The samples were not split and therefore high sample heterogeneity is expected.

### **3.2.2 Laboratory**

ALS laboratory reported no QA/QC issues with the soil, berry or crab data. For the fish data, ALS reported exceedances of the DQO for calcium and mercury in the method blank. Sample results were at least 5-times greater than the blank result and are considered reliable. For the mussel data, ALS reported laboratory duplicate results outside of the ALS DQO for several metals (aluminum, barium, cesium, chromium, cobalt, gallium, iron, lead, lithium, manganese, nickel, thorium, uranium, vanadium and yttrium) due to sample heterogeneity. Variability is expected with composite tissue samples due to differences in age and life history of the individual mussels. During laboratory analysis, homogenization of the sample may also not be 'complete', such that subsampling for analysis will result in additional variability in the results.

### 4.0 CONCLUSIONS

The purpose of the baseline sampling program was to determine the baseline concentrations of metals in vegetation, soil, fish and shellfish within the Proposed Project area. The review of the methods, results, detection limits and QA/QC did identify some variability issues with laboratory and field duplicates. However, because the data will be pooled and central tendency values calculated, and the variability within samples was random (i.e., had no systematic bias); the data are considered suitable for inclusion in the human health assessment.

**Notes:**

All concentrations in milligrams per kilogram (mg/kg), unless otherwise noted.

"-" = not calculated; < = below laboratory detection limit; % = percent; FD = Field duplicate; FDA = Field duplicate available; QA/QC = Quality assurance/quality control.

Mean = average of two values.

Relative percent difference (RPD) = absolute difference between two values divided by the mean of the two values. RPD is calculated when the concentrations is greater than five times the detection limit.

Difference factor (DF) = absolute difference between two values divided by the method detection limit. Difference factor is calculated when the concentration is less than five times the detection limit.

**Bold and red** results indicate the RPD exceeds 35% or the DF exceeds 2.0.

**Notes:**

All concentrations in milligrams per kilogram (mg/kg), unless otherwise noted.

"-" = not calculated; < = below laboratory detection limit; % = percent; FD = Field duplicate; FDA = Field duplicate available; QA/QC = Quality assurance/quality control.

Mean = average of two values.

Relative percent difference (RPD) = absolute difference between two values divided by the mean of the two values. RPD is calculated when the concentrations is greater than five times the detection limit.

Difference factor (DF) = absolute difference between two values divided by the method detection limit. Difference factor is calculated when the concentration is less than five times the detection limit.

**Bold and red** results indicate the RPD exceeds 20% or the DF exceeds 2.0.

**Notes:**

All concentrations in milligrams per kilogram (mg/kg), unless otherwise noted.

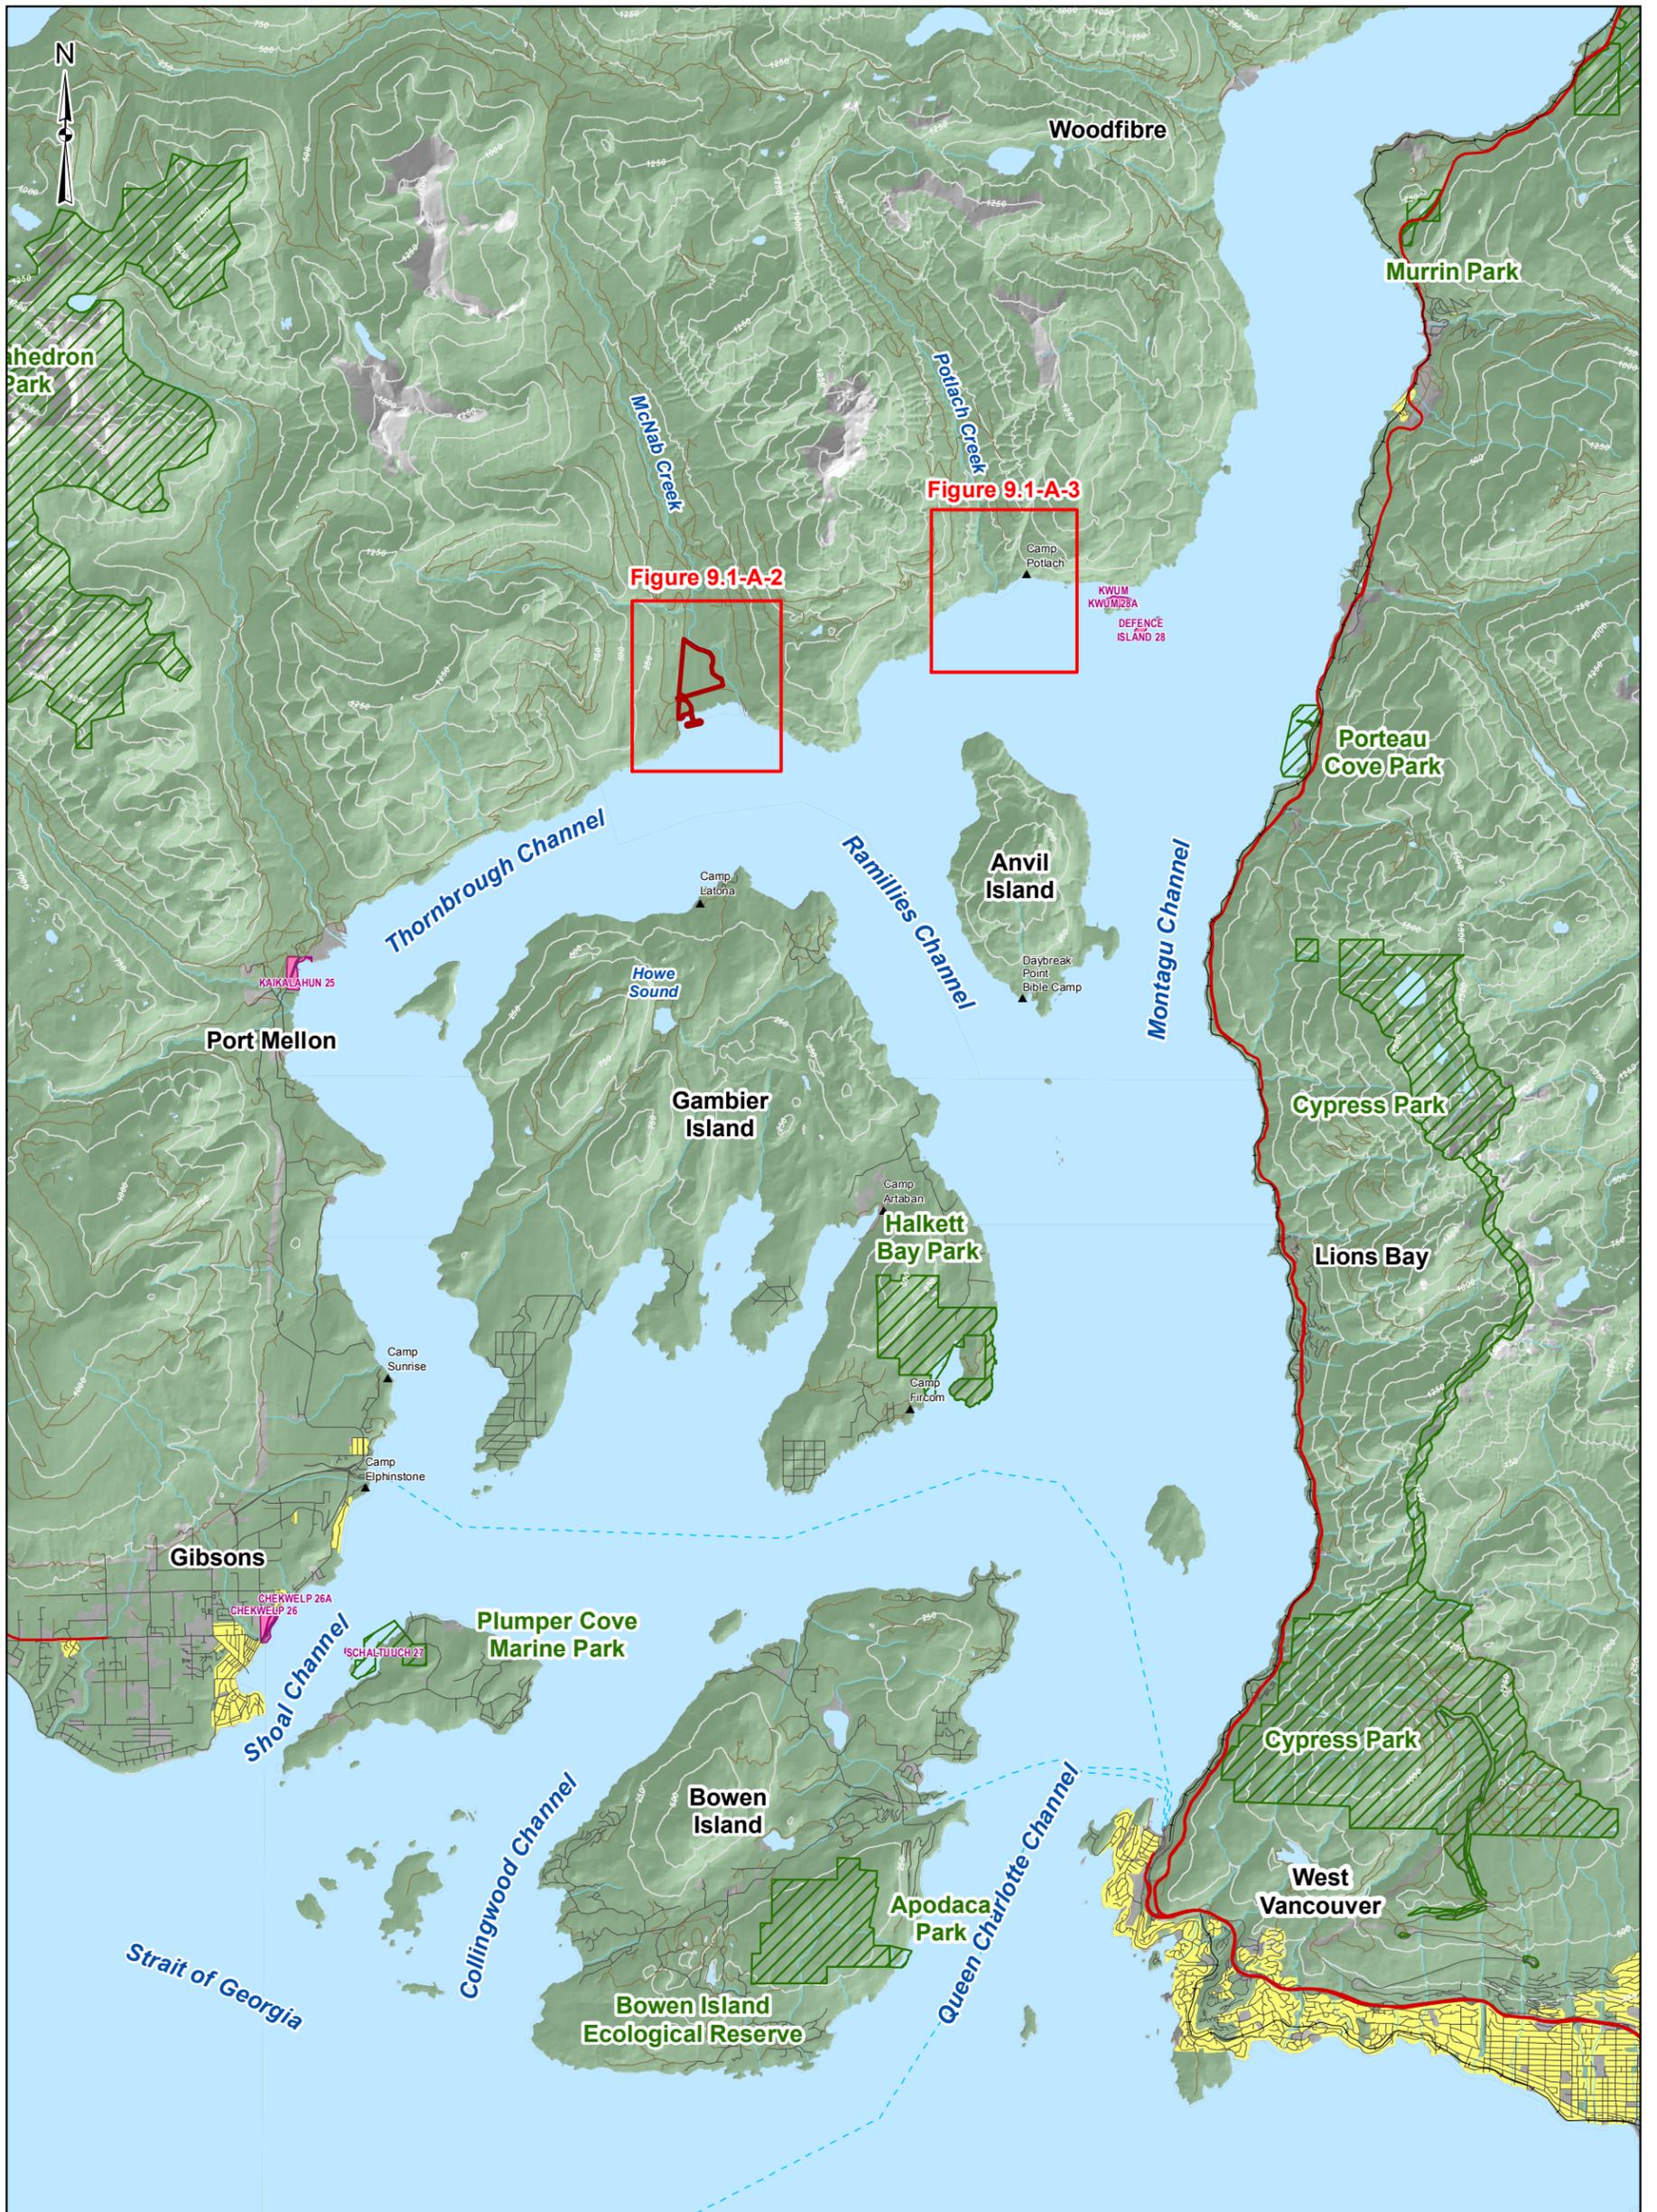

"-" = not calculated; < = below laboratory detection limit; % = percent.

Mean = average of two values.

Relative percent difference (RPD) = absolute difference between two values divided by the mean of the two values. RPD is calculated when the concentrations is greater than five times the detection limit.

Difference factor (DF) = absolute difference between two values divided by the method detection limit. Difference factor is calculated when the concentration is less than five times the detection limit.

**Bold and red** results indicate the RPD exceeds 35% or the DF exceeds 2.0.

## Reference Information

### QC Samples with Qualifiers & Comments:

| QC Type Description | Parameter         | Qualifier | Applies to Sample Number(s) |
|---------------------|-------------------|-----------|-----------------------------|
| Duplicate           | Sodium (Na)-Total | DLIV      | L1350062-1, -4              |
| Duplicate           | Sodium (Na)-Total | DLIV      | L1350062-1, -4              |

### Qualifiers for Individual Parameters Listed:

| Qualifier | Description                                    |
|-----------|--|
| DLIV      | Detection Limit Adjusted: Lower Initial Volume |

### Test Method References:

| ALS Test Code   | Matrix | Test Description                   | Method Reference**   |
|---|--------|------------------------------------|----------------------|
| <b>AG-DRY-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (DRY)     | EPA 200.3/200.8      |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                      |
| <b>AG-WET-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (WET)     | EPA 200.3/200.8      |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on wet weight basis.  |        |                                    |                      |
| <b>HG-200.2-CVAF-VA</b>   | Soil   | Mercury in Soil by CVAFS           | EPA 200.2/245.7      |
| This analysis is carried out using procedures from CSR Analytical Method: "Strong Acid Leachable Metals (SALM) in Soil", BC Ministry of Environment, 26 June 2009, and procedures adapted from EPA Method 200.2. The sample is manually homogenized, dried at 60 degrees Celsius, sieved through a 2 mm (10 mesh) sieve (this sieve step is omitted for international soil samples), and a representative subsample of the dry material is weighed. The sample is then digested at 95 degrees Celsius for 2 hours by block digester using concentrated nitric and hydrochloric acids. Instrumental analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry(EPA Method 245.7).                         |        |                                    |                      |
| Method Limitation: This method is not a total digestion technique. It is a very strong acid digestion that is intended to dissolve those metals that may be environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.   |        |                                    |                      |
| <b>HG-DRY-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (DRY)   | EPA 200.3, EPA 245.7 |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009.   |        |                                    |                      |
| <b>HG-WET-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (WET)   | EPA 200.3, EPA 245.7 |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by inductively coupled plasma - optical emission spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009.   |        |                                    |                      |
| <b>MET-200.2-CCMS-VA</b>  | Soil   | Metals in Soil by CRC ICPMS        | EPA 200.2/6020A      |
| This analysis is carried out using procedures from CSR Analytical Method: "Strong Acid Leachable Metals (SALM) in Soil", BC Ministry of Environment, 26 June 2009, and procedures adapted from EPA Method 200.2. The sample is manually homogenized, dried at 60 degrees Celsius, sieved through a 2 mm (10 mesh) sieve (this sieve step is omitted for international soil samples), and a representative subsample of the dry material is weighed. The sample is then digested at 95 degrees Celsius for 2 hours by block digester using concentrated nitric and hydrochloric acids. Instrumental analysis of the digested extract is by collision cell inductively coupled plasma - mass spectrometry (modified from EPA Method 6020A). |        |                                    |                      |
| Method Limitation: This method is not a total digestion technique. It is a very strong acid digestion that is intended to dissolve those metals that may be environmentally available. ## Reference Information

Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by Inductively Coupled Plasma - Optical Emission Spectrophotometry, adapted from US EPA Method 6010B. This digestion procedure was implemented on October 5, 2009.

**MOISTURE-TISS-VA**      Tissue      % Moisture in Tissues      ASTM D2974-00 Method A

This analysis is carried out gravimetrically by drying the sample at 105 C for a minimum of six hours.

**PH-1:2-VA**      Soil      pH in Soil (1:2 Soil:Water Extraction)      BC WLAP METHOD: PH, ELECTROMETRIC, SOIL

This analysis is carried out in accordance with procedures described in the pH, Electrometric in Soil and Sediment method - Section B Physical/Inorganic and Misc. Constituents, BC Environmental Laboratory Manual 2007. The procedure involves mixing the dried (at <60°C) and sieved (No. 10 / 2mm) sample with deionized/distilled water at a 1:2 ratio of sediment to water. The pH of the solution is then measured using a standard pH probe.

\*\* ALS test methods may incorporate modifications from specified reference methods to improve performance.

*The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:*

| Laboratory Definition Code | Laboratory Location |
|----------------------------|---------------------|
|----------------------------|---------------------|

|    |   |
|----|---|
| VA | ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA |
|----|---|

### Chain of Custody Numbers:

|           |           |
|-----------|-----------|
| 10-050130 | 10-050150 |
|-----------|-----------|

### GLOSSARY OF REPORT TERMS

*Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.*

*mg/kg - milligrams per kilogram based on dry weight of sample.*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample.*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.*

*mg/L - milligrams per litre.*

*< - Less than.*

*D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

**UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.**

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

## Legend & Qualifier Definitions:

- EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
- EHTR: Exceeded ALS recommended hold time prior to sample receipt.
- EHTL: Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
- EHT: Exceeded ALS recommended hold time prior to analysis.
- Rec. HT: ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1350062 were received on 20-AUG-13 09:30.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

## Reference Information

### Test Method References:

| ALS Test Code   | Matrix | Test Description                   | Method Reference**     |
|---|--------|------------------------------------|------------------------|
| <b>AG-DRY-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (DRY)     | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                        |
| <b>AG-WET-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (WET)     | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on wet weight basis.  |        |                                    |                        |
| <b>HG-DRY-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (DRY)   | EPA 200.3, EPA 245.7   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009. |        |                                    |                        |
| <b>HG-WET-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (WET)   | EPA 200.3, EPA 245.7   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. | <b>MET-DRY-HRMS-VA</b>  | Tissue | Metals in Tissue by HR-ICPMS (DRY) | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                        |
| <b>MET-DRY-ICP-VA</b>   | Tissue | Metals in Tissue by ICPOES (DRY)   | EPA 200.3, EPA 6010B   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by Inductively Coupled Plasma - Optical Emission Spectrophotometry, adapted from US EPA Method 6010B. This digestion procedure was implemented on October 5, 2009.              |        |                                    |                        |
| <b>MET-WET-HRMS-VA</b>  | Tissue | Metals in Tissue by HR-ICPMS (WET) | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). | <b>MOISTURE-TISS-VA</b>   | Tissue | % Moisture in Tissues              | ASTM D2974-00 Method A |
| This analysis is carried out gravimetrically by drying the sample at 105 C for a minimum of six hours.  |        |                                    |                        |

\*\* ALS test methods may incorporate modifications from specified reference methods to improve performance.

*The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:*

| Laboratory Definition Code | Laboratory Location                                     |
|----------------------------|---|
| VA                         | ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA |

### Chain of Custody Numbers:

10-034377                      10-034384

### GLOSSARY OF REPORT TERMS

*Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.*

*mg/kg - milligrams per kilogram based on dry weight of sample.*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample.*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.*

*mg/L - milligrams per litre.*

*< - Less than.*

*D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

## Sample Parameter Qualifier Definitions:

---

| Qualifier | Description   |
|-----------|---|
| J         | Duplicate results and limits are expressed in terms of absolute difference.                 |
| RPD-NA    | Relative Percent Difference Not Available due to result(s) being less than detection limit. |

---

## Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

---

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

## Qualifiers for Individual Parameters Listed:

| Qualifier | Description |
|-----------|-------------|
|-----------|-------------|

## Reference Information

DUP-H Duplicate results outside ALS DQO, due to sample heterogeneity.

### Test Method References:

| ALS Test Code   | Matrix | Test Description                   | Method Reference**     |
|---|--------|------------------------------------|------------------------|
| <b>AG-DRY-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (DRY)     | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                        |
| <b>AG-WET-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (WET)     | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on wet weight basis.  |        |                                    |                        |
| <b>HG-DRY-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (DRY)   | EPA 200.3, EPA 245.7   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009. |        |                                    |                        |
| <b>HG-WET-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (WET)   | EPA 200.3, EPA 245.7   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009. |        |                                    |                        |
| <b>MET-DRY-HRMS-VA</b>  | Tissue | Metals in Tissue by HR-ICPMS (DRY) | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                        |
| <b>MET-DRY-ICP-VA</b>   | Tissue | Metals in Tissue by ICPOES (DRY)   | EPA 200.3, EPA 6010B   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by Inductively Coupled Plasma - Optical Emission Spectrophotometry, adapted from US EPA Method 6010B. This digestion procedure was implemented on October 5, 2009.              |        |                                    |                        |
| <b>MET-WET-HRMS-VA</b>  | Tissue | Metals in Tissue by HR-ICPMS (WET) | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on wet weight basis.  |        |                                    |                        |
| <b>MET-WET-ICP-VA</b>   | Tissue | Metals in Tissue by ICPOES (WET)   | EPA 200.3, EPA 6010B   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by Inductively Coupled Plasma - Optical Emission Spectrophotometry, adapted from US EPA Method 6010B. This digestion procedure was implemented on October 5, 2009.              |        |                                    |                        |
| <b>MOISTURE-TISS-VA</b>   | Tissue | % Moisture in Tissues              | ASTM D2974-00 Method A |
| This analysis is carried out gravimetrically by drying the sample at 105 C for a minimum of six hours.  |        |                                    |                        |

\*\* ALS test methods may incorporate modifications from specified reference methods to improve performance.

*The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:*

| Laboratory Definition Code | Laboratory Location                                     |
|----------------------------|---|
| VA                         | ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA |

### Chain of Custody Numbers:

|           |           |
|-----------|-----------|
| 10-034385 | 10-034386 |
|-----------|-----------|

## Reference Information

### GLOSSARY OF REPORT TERMS

*Surrogate* - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

*mg/kg* - milligrams per kilogram based on dry weight of sample.

*mg/kg wwt* - milligrams per kilogram based on wet weight of sample.

*mg/kg lwt* - milligrams per kilogram based on lipid-adjusted weight of sample.

*mg/L* - milligrams per litre.

*<* - Less than.

*D.L.* - The reported Detection Limit, also known as the Limit of Reporting (LOR).

*N/A* - Result not available. Refer to qualifier code and definition for explanation.

*Test results reported relate only to the samples as received by the laboratory.*

**UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.**

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

| MSD   | Matrix Spike Duplicate                      |
| ADE   | Average Desorption Efficiency               |
| MB    | Method Blank                                |
| IRM   | Internal Reference Material                 |
| CRM   | Certified Reference Material                |
| CCV   | Continuing Calibration Verification         |
| CVS   | Calibration Verification Standard           |
| LCSD  | Laboratory Control Sample Duplicate         |

## Sample Parameter Qualifier Definitions:

---

| Qualifier | Description   |
|-----------|---|
| DUP-H     | Duplicate results outside ALS DQO, due to sample heterogeneity.                             |
| J         | Duplicate results and limits are expressed in terms of absolute difference.                 |
| RPD-NA    | Relative Percent Difference Not Available due to result(s) being less than detection limit. |

---

## Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

---

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

| Duplicate           | Calcium (Ca)-Total   | DUP-H     | L1401240-1                  |
| Duplicate           | Calcium (Ca)-Total   | DUP-H     | L1401240-1                  |

### Qualifiers for Individual Parameters Listed:

| Qualifier | Description   |
|-----------|---|
| B         | Method Blank exceeds ALS DQO. All associated sample results are at least 5 times greater than blank levels and are considered reliable. |
| DUP-H     | Duplicate results outside ALS DQO, due to sample heterogeneity.   |

### Test Method References:

| ALS Test Code   | Matrix | Test Description                   | Method Reference**     |
|---|--------|------------------------------------|------------------------|
| <b>AG-DRY-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (DRY)     | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                        |
| <b>AG-WET-HRMS-VA</b>   | Tissue | Ag in Tissue by HR-ICPMS (WET)     | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on wet weight basis.  |        |                                    |                        |
| <b>HG-DRY-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (DRY)   | EPA 200.3, EPA 245.7   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009. |        |                                    |                        |
| <b>HG-WET-CVAFS-VA</b>  | Tissue | Mercury in Tissue by CVAFS (WET)   | EPA 200.3, EPA 245.7   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by atomic fluorescence spectrophotometry or atomic absorption spectrophotometry, adapted from US EPA Method 245.7. This digestion procedure was implemented on October 5, 2009. |        |                                    |                        |
| <b>MET-DRY-HRMS-VA</b>  | Tissue | Metals in Tissue by HR-ICPMS (DRY) | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on dry weight basis.  |        |                                    |                        |
| <b>MET-DRY-ICP-VA</b>   | Tissue | Metals in Tissue by ICPOES (DRY)   | EPA 200.3, EPA 6010B   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by Inductively Coupled Plasma - Optical Emission Spectrophotometry, adapted from US EPA Method 6010B. This digestion procedure was implemented on October 5, 2009.              |        |                                    |                        |
| <b>MET-WET-HRMS-VA</b>  | Tissue | Metals in Tissue by HR-ICPMS (WET) | EPA 200.3/200.8        |
| Trace metals in tissue are analyzed by high resolution inductively coupled plasma mass spectrometry (HR-ICPMS) modified from US EPA Method 200.8, (Revision 5.5). The sample preparation procedure is modified from US EPA 200.3. Analytical results are reported on wet weight basis.  |        |                                    |                        |
| <b>MET-WET-ICP-VA</b>   | Tissue | Metals in Tissue by ICPOES (WET)   | EPA 200.3, EPA 6010B   |
| This method is adapted from US EPA Method 200.3 "Sample Procedures for Spectrochemical Determination of Total Recoverable Elements in Biological Tissues" (1996). Tissue samples are homogenized and sub-sampled prior to hotblock digestion with nitric and hydrochloric acids, in combination with repeated additions of hydrogen peroxide. Analysis is by Inductively Coupled Plasma - Optical Emission Spectrophotometry, adapted from US EPA Method 6010B. This digestion procedure was implemented on October 5, 2009.              |        |                                    |                        |
| <b>MOISTURE-TISS-VA</b>   | Tissue | % Moisture in Tissues              | ASTM D2974-00 Method A |
| This analysis is carried out gravimetrically by drying the sample at 105 C for a minimum of six hours.  |        |                                    |                        |

## Reference Information

---

\*\* ALS test methods may incorporate modifications from specified reference methods to improve performance.

---

*The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:*

---

| Laboratory Definition Code | Laboratory Location                                     |
|----------------------------|---|
| VA                         | ALS ENVIRONMENTAL - VANCOUVER, BRITISH COLUMBIA, CANADA |

---

**Chain of Custody Numbers:**

---

10-371262

**GLOSSARY OF REPORT TERMS**

*Surrogate - A compound that is similar in behaviour to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.*

*mg/kg - milligrams per kilogram based on dry weight of sample.*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample.*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight of sample.*

*mg/L - milligrams per litre.*

*< - Less than.*

*D.L. - The reported Detection Limit, also known as the Limit of Reporting (LOR).*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

**UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.**

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

| LCSD  | Laboratory Control Sample Duplicate         |

## Sample Parameter Qualifier Definitions:

---

| Qualifier | Description   |
|-----------|---|
| B         | Method Blank exceeds ALS DQO. All associated sample results are at least 5 times greater than blank levels and are considered reliable. |
| DUP-H     | Duplicate results outside ALS DQO, due to sample heterogeneity.   |
| J         | Duplicate results and limits are expressed in terms of absolute difference.   |
| RPD-NA    | Relative Percent Difference Not Available due to result(s) being less than detection limit.   |

---

## Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

---

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

As a global, employee-owned organisation with over 50 years of experience, Golder Associates is driven by our purpose to engineer earth's development while preserving earth's integrity. We deliver solutions that help our clients achieve their sustainable development goals by providing a wide range of independent consulting, design and construction services in our specialist areas of earth, environment and energy.
