NOTES:

1. UNITS ARE IN mg/L UNLESS OTHERWISE STATED.
2. BCWQG-Rec: BC WATER QUALITY GUIDELINE FOR RECREATIONAL WATER USE.
3. BCWQG-Irrigation: BC WATER QUALITY GUIDELINES FOR IRRIGATION.
4. BCWQG-Livestock: BC WATER QUALITY GUIDELINES FOR LIVESTOCK.
5. CEQG-Irrigation: CCME GUIDELINES FOR IRRIGATION.
6. CEQG-Livestock CCME GUIDELINES FOR IRRIGATION.
7. THIS SHADING INDICATES THE VALUE EXCEEDS THE LIMITS OF BCWQG-Irrigation.
8. THIS SHADING INDICATES THE VALUE EXCEEDS THE LIMITS OF BCWQG-Livestock.
9. THIS SHADING INDICATES THE VALUE EXCEEDS THE LIMITS OF BCWQG-Irrigation AND BCWQG-Livestock.
10. **GREEN BOLD TEXT INDICATES THE VALUE EXCEEDS THE LIMITS OF CCME-Irrigation.**
11. **GREY BOLD TEXT INDICATES THE VALUE EXCEEDS THE LIMITS OF CCME-Livestock.**
12. **RED BOLD TEXT INDICATES THE VALUE EXCEEDS THE LIMITS OF CCME-Irrigation AND CCME-Livestock.**
13. GUIDELINE APPLIES TO THE DISSOLVED CONCENTRATION ONLY.
14. GUIDELINE APPLIES TO THE TOTAL CONCENTRATION ONLY.
15. DETECTION LIMIT VALUES ARE DISPLAYED WITH LESS THAN SYMBOL (<).
16. GUIDELINE IS 1 mg/L FOR CHRONIC EXPOSURE (AVERAGE OVER 30 DAYS) AND 2 mg/L FOR SHORT-TERM EXPOSURE (SINGLE SAMPLES).
17. GUIDELINE IS CROP-DEPENDENT; THE MOST CONSERVATIVE VALUE IS FOR CEREALS.
18. GUIDELINE IS CROP-DEPENDENT; THE MOST CONSERVATIVE VALUE IS FOR CITRUS.
19. GUIDELINE IS FOR POORLY DRAINED SOIL WITH A RATIO OF Cu : Mo GREATER THAN 2 : 1.
20. GUIDELINE IS FOR FEED WATER CONTAINING FLUORIDE.

NOTES:

1. UNITS ARE IN mg/L UNLESS OTHERWISE STATED.

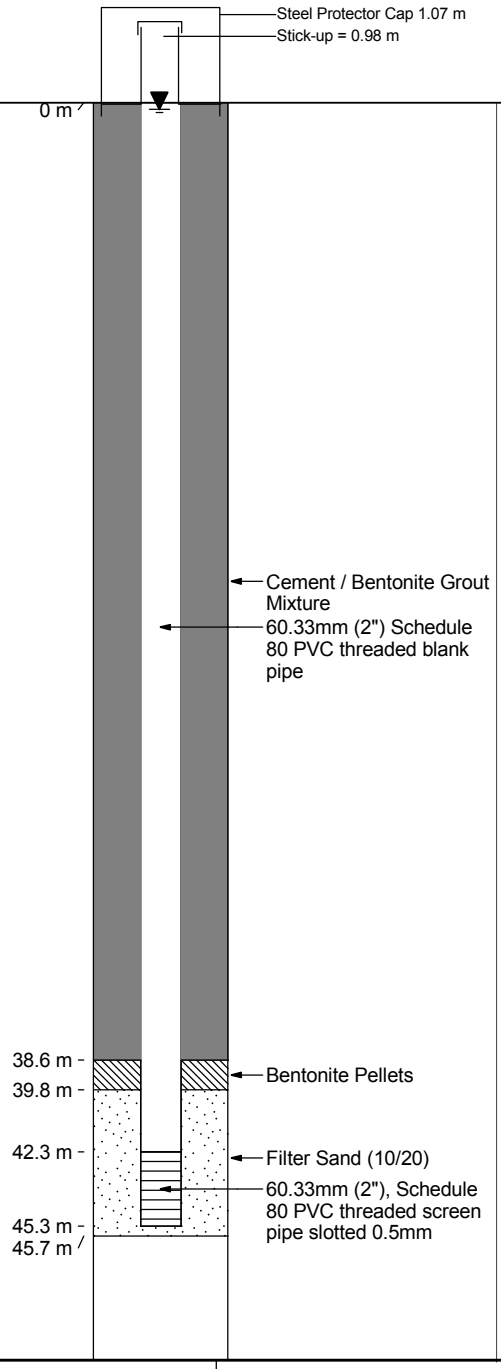
ELEVATION - (m) | DEPTH - (m) | GRAPHIC LOG

GEOLOGICAL UNIT

(0 to 9)
CLAY, medium plasticity, some well graded sand and gravel, sub angular, grey.

(9 to 10.4)
SAND/GRAVEL, well graded sand and gravel, sub angular, some clay, medium plasticity, moist, grey.

(10.4 to 45.7)
BEDROCK, Soft, conglomerate with rounded well graded gravel and sand embedded, colour alternating from red to grey.



NOTES

Water level measured after installation (23-JUN-2011).

152mm (6") drill hole to top of bedrock

146mm (5-3/4") drill hole to end

High moisture zone around ~9 m

Moisture level increased with water produced shortly after 42 m. Discharge approximately 8L/min (visual estimate).

APPENDIX F4

BGC14 SERIES WELLS

(Pages F4-1 to F4-105)

LEGEND FOR WELL LOGS

The various parameters depicted on the well logs are described below according to the select headings found on the form.

Location

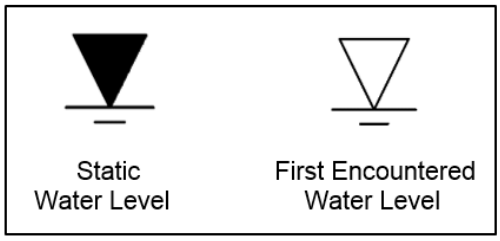
TSF – Tailings Storage Facility
EMRSF – East Mine Rock Storage Facility
SMRSF – South Mine Rock Storage Facility

Depth

Depth below ground surface is measured in metres.

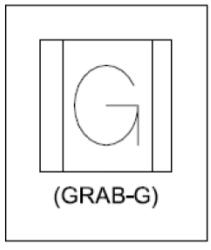
Water Levels

Groundwater levels are represented by the symbols shown below. First encountered water levels were obtained during drilling progress, static water levels were measured after drilling and piezometer installation is complete.



Sample Type and Sample Number

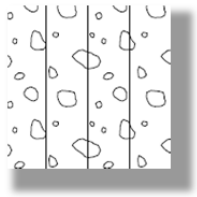
Samples were collected to permit cross-checking of logged geology by the KGHM Ajax site geologist and were limited to grab samples collected from the Dual Rotary drill cuttings. Samples are numbered and represented graphically by the symbol shown below. All samples collected from test holes are shown on the logs; however, will not be tested, as they are considered to be “disturbed” due to aggressive drilling methods.



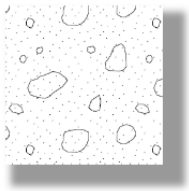
Symbol

Sediment types and rock are represented graphically by the following symbols:

GRAVEL



Silt/Gravel (GM)

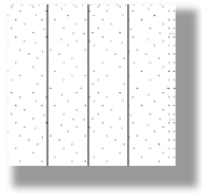


Sand/Gravel (GSP)

Poorly-graded Gravel (GP)

Well-graded Gravel (GW)

SAND

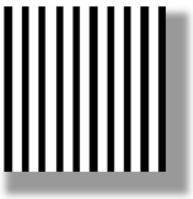


Silt/Sand (SM)

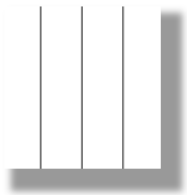
Poorly-graded Sand (SP)

Well-graded Sand (SW)

SILT

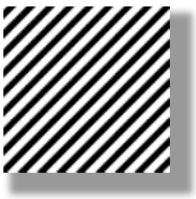


High Plastic Silt (MH)

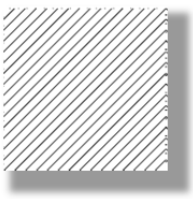


Low Plastic Silt (ML)

CLAY



High Plastic Clay (CH)

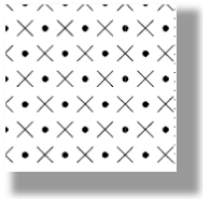


Low Plastic Clay (CI/CL)

OTHER

Boulders and Cobbles (BLDRCBBL)

BEDROCK



Ironmask Hybrid

Nicola Group

Undifferentiated Bedrock

Lithologic Description

Due to the aggressive nature of Dual Rotary drilling, sediments and lithology are considered to be of disturbed nature, and are described using simplified observations, where possible.
Disturbed sediments are classified according to the Unified Soil Classification System (USCS), and are described typically by the following features: primary constituent; particle size range; secondary constituents; gradation; colour; particle shape and angularity; maximum particle size; moisture content; presence of foreign materials.
Disturbed bedrock cuttings are described according to the International Society for Rock Mechanics (ISRM 1978). The following descriptions are typically listed for each main lithological unit on the logs: grain size; colour; alteration and weathering; vein and faulting characteristics.

Weathering Grade

Weathering and alteration of the rock mass is described according to Bieniawski 1976 parameters defined below.

Alteration and Weathering Rating (Bieniawski 1976)

Degree of Alteration/Weathering	Description	Rating
Fresh	Alteration may result in an improvement in rock competency (e.g. silicification)	W1
Slightly Weathered/Altered	Rock strength unchanged; weathering on joints only	W2
Moderately Weathered/Altered	Rock is discoloured but rock strength only slightly affected; discontinuities are weathered	W3
Highly Weathered/Altered	Rock is discoloured and strength is significantly reduced by weathering	W4
Completely Weathered/Altered	Original fabric and relict structures remain but rock is decomposed and friable	W5
Residual Soil	Original fabric destroyed	W6

Note: If alteration/weathering is > W4 or UCS grade ≤R0, then RQD is 0% for that section. Also, if the UCS grade ≤R0, the number of discontinuities is recorded as the default 99.

Instrument Details

Fill materials placed in the test holes are graphically represented by the symbols below. All test holes contain standpipe piezometers. These instruments are shown below in a default filter sand fill.
