EAB Wastewater 1B	Alternative assessment	EIS/EA, Chapter 4; EIS/EA Chapter 5, Alternatives Assessment TSD	The EA (Environmental Assessment) report has identified the preferred alternative for development of the open pit gold mine and associated processing and support facilities, including two open pits, an Ore Processing Facility which includes a processing plant, a Tailings Management Facility, a Waste Rock Management Facility, Linear Infrastructure including an access road and a transmission line, a Water Management System, and supporting infrastructure that includes an accommodation camp for workers. The approach used in the EA report to identify the best alternatives for developing specific Project components is reasonable and acceptable.	Thank you for your comment. Canadian Malartic agrees that the alternatives assessment is reasonable and acceptable.	The response is sufficient.	Acknowledged	N/A
