MNDM 3B	Mine Closure and Rehabilitation		The proponent's approach to revegetation of the tailings management area does not fully meet the intent of the Mine Rehabilitation Code.	Thank you for your comment. Ongoing consultation with the MNDM will take place prior to the official submission of a Certified Closure Plan. Appropriate monitoring and maintenance commitments regarding revegetation of the tailings management area will be included in the Certified Closure Plan as required.	The response is sufficient. Canadian Malartic must submit an updated <i>Notice of Project Status [Mining Act Section 141 (1)(a)]</i> and follow the direction provided by MNDM prior to submitting a certified closure plan.
