MNRF-WTCM 3	Below Normal Water Level and Outflow Conditions at Raft Lake Dam	Water Taking Contingency Measures, Section 1.2	MNRF unaware of any planned mechanism to ensure that there is no net taking of water during contingency measures. Will CMC install intake and outflow gauges? Currently, MNRF receives daily readings at all dams along Seine River in order to monitor compliance with the SRWMP. Will CMC's taking and discharge rates be made available daily to enable the MNRF to monitor in conjunction with the SRWMP?	CMC will install appropriate instrumentation to monitor and record water taking and discharge on a daily basis. An information sharing plan will be included in the operational water management technical agreement between CMC and the hydro-power companies and CMC will adhere to the requirement of this plan. Daily water taking and discharge volumes can be provided to the MNRF if required.
