
HAMMOND REEF GOLD PROJECT RESPONSE TO COMMENTS ON FINAL EIS/EA

COMMENT – T-60

Source: Canadian Environmental Assessment Agency

Summary of Comment

It is noted in MNR comment (MNR-16) that the 30m is the minimum requirement for clearing flammable material around mines in forested areas and should be stated as a mitigation measure.

Proposed Action

Provide confirmation that the minimum requirement for clearing flammable material around mines in forested areas will be used as a mitigation measure.

Reference to EIS

Chapter 5, Section 5.5 (p.5-54)

Response

Yes, a 30 m clearing offset for flammable material will be respected in design and construction.
