DD.7.9 Feedback from Aboriginal Communities provided by the CEA Agency to Treasury	119

DD.1 INTRODUCTION

An important aspect of the development of the Goliath Gold Project is engagement and consultation with interested and affected stakeholders, communities in proximity to the project, including Aboriginal communities and with government agencies.

While there are certain legal obligations pertaining to consulting about the Goliath Gold Project with the above named groups, Treasury's has determined that the Goliath Gold Project will bring significant benefits to the entire region. The company is striving to ensure that the project is well known and understood in order that Treasury may develop mutually beneficial relationships with interested and affected parties as the mine is brought into production.

DD.2 PROJECT DETAILS

The report is associated with an: Environmental Impact Statement

Project Name: Goliath Gold Project

Name of Proponent: Treasury Metals Incorporated

The Project Description for the Goliath Gold Project was submitted to the Canadian Environmental Assessment (CEA) Agency on November 26, 2012 and approved on November 30, 2012. Following approval of the Project Description, the CEA Agency provided "Environmental Impact Statement Guidelines" relating to the Goliath Gold Project to Treasury Metals on February 21, 2013.

On March 12, 2013, letters were sent to the Chiefs and Councils of First Nations and Aboriginal Communities with an interest in the Goliath Gold Project by Gordon MacKay, Director of Mine Rehabilitation for the Ontario Ministry of Natural Resources. The letter from Mr. Mackay advised First Nations and Aboriginal communities that a Notice of Project Status had been filed by Treasury Metals indicating Treasury's intention to bring the Goliath Gold Project into production. The letter also advised that:

"Prior to commencing mine development and production, TMI must file a closure plan for the Project with the Ministry. A closure plan outlines how lands impacted by the Project will be rehabilitated and includes financial assurances to cover costs associated with rehabilitating the lands."

Additionally Mr. Mackay indicated:

"The Ministry has determined that prior to filing the closure plan; consultation regarding the project will be required with those Aboriginal communities whose Aboriginal or Treaty rights might be adversely affected by the Project. While the duty to consult lies with the Crown, the Ministry is delegating procedural aspects of consultation to TMI, which has been directed to contact your community with a view to:

- Provide detailed and accessible information with regard to the Project;
- Gathering information from your community about potential adverse impacts, if any, the Project may have on your Aboriginal or treaty rights; and
- Discussing with your community, possible ways to avoid, minimize or otherwise address any potential adverse impacts to your Aboriginal or treaty rights.

An Aboriginal Consultation Plan relating to Treasury's Goliath Gold Project was submitted to the Ministry of Northern Development and Mines on July 3, 2013. Consistent with Treasury's Aboriginal Consultation Plan, efforts have been ongoing to engage Aboriginal communities to inform them about the Goliath Gold Project and to identify any potential impacts that the project might present to Aboriginal and Treaty rights. Treasury has also provided information relating to the opportunities for employment and Aboriginal businesses which may be available as a result of the Goliath Gold Project.

As requested by MNDM in a letter to Mr. Martin Walter of Treasury Metals dated March 25, 2014, an "Interim" Aboriginal Consultation report was prepared and submitted to the Ontario Ministry of Northern Development and Mines on May 12, 2014. Since submission of the Project Description to the CEA Agency and the Aboriginal Consultation Plan to MNDM, Treasury staff has been working along with a variety of consultants to complete environmental baseline studies and reports as well as preliminary design work associated with the Goliath Gold Project. Information resulting from these studies and reports is being shared with Aboriginal communities as it becomes available.

Treasury analysis indicates that the Goliath Gold Project will provide substantial benefits to the people of Northwestern Ontario, including First Nations and Aboriginal communities in the immediate area of the project and looks forward to developing mutually beneficial relationships with area communities.

DD.2.1 History of the Goliath Gold Project

In order to fully evaluate the potential for impacts to Aboriginal and Treaty rights that might arise from the Goliath Gold Project, it is very important that the location and past history of the Goliath Site be clearly understood.

Treasury recognizes that the site associated with the Goliath Gold Project does fall within the overall area bounded by Treaty 3. Within the area boundaries of Treaty 3 there is a combination of Crown and privately held lands. In the case of Treasury Metals, there are only a few small parcels of Crown land associated with the Goliath Project. The majority of the project site has a long history of private ownership and development including public roads and a major electrical power corridor. The private properties associated with the project have been purchased by Treasury Metals at considerable expense.

It is noteworthy that the majority of the site has been under private ownership since the early 1900s and that most of these properties have been logged in the recent past. These properties were originally removed from Treaty 3 lands under the provision of Treaty 3:

"...and saving and excepting such tracts as may from time to time be taken up for settlement, mining, lumbering or other purposes..."

While there lands were originally intended for settlement, any impacts to Aboriginal and Treaty rights associated with their removal from the Treaty 3 land base would have been experienced at time of their original removal. Developing a mine on these privately owned properties does not present a new impact to Aboriginal and Treaty rights. The few parcels of Crown land that are associated with the project are by and large small in size and surrounded by private properties.

Treasury Metals does recognize that potential adverse impacts from mine development may not be limited specifically to the actual mine site. Potential adverse impacts to water and air quality away from the mine site and which may in turn have adverse impacts on Aboriginal and Treaty rights have been raised as a concern.

As the traditional means of travel by Aboriginal peoples was along water ways it is logical that most sites that are of significance to Aboriginal people are to be found in close proximity to lakes, rivers or navigable streams. The Goliath site is not immediately adjacent to such water bodies. The site lies approximately 2.75 km to the northeast of Wabigoon Lake. Between Wabigoon Lake and the Goliath site a great deal of development has already occurred. Developments between Wabigoon Lake and the Goliath Gold Site include the mainline of the Canadian Pacific Railway (built in the 1880s), the Trans-Canada Highway (built in the 1930s) and the Trans Canada Pipeline (built in the 1950s).

The proposed mine site lies approximately 2 km. to the southeast of Thunder Lake. Development between the site and Thunder Lake include East Thunder Lake Road and numerous private homes both fronting on Thunder Lake and to the southeast of East Thunder Lake Road.

Immediately to the south of the proposed mine site lies Norman Road. A number of private homes are located on the north side of Norman Road. All of these homes have now been purchased by Treasury Metals.

Immediately to the east of the proposed mine site and between the proposed mine site and the proposed tailings pond lays Tree Nursery Road. At the north end of Tree Nursery road and approximately 2.5 km from the center of the proposed open pit lays the former Ontario Ministry of Natural Resources Tree Nursery. This property was purchased by Treasury Metals in 2010 and is now being used for offices and warehousing. The tree nursery site was developed by the Ontario Government in the 1950s and involved the clearing and leveling of approximately 128 hectares as well as the damming of two small streams flowing into Thunder Lake. Under Treasury's ownership, much of the former tree nursery is reverting to a natural forest condition and can be expected to contribute to the habitat of a variety of wildlife species. This will to a significant degree offset habitat impacted by the development of the Goliath Mine and associated infrastructure.

A major hydro transmission line crosses the proposed mine property just east of the proposed pit location. The proposed processing plant will be located immediately to the south of this hydro line on the east side of Tree Nursery Road and north of Normans Road. Lower voltage hydro lines extend along Norman Road and for the full length of Tree Nursery Road.

In essence the proposed Goliath Gold Site is completely surrounded by and in close proximity to major existing infrastructure.

Also of significance is the flooding of Wabigoon and Dinorwic Lakes which occurred in 1897 when a dam was constructed on the Wabigoon River at the current location of the City of Dryden. This dam was subsequently reconstructed and raised in 1912 to enable hydroelectric power generation. Impacts to the First Nation community of Wabigoon Lake Ojibway Nation (WLON) resulting from the flooding of Wabigoon/Dinorwic Lakes included the flooding of reserve lands, as well as impacts to wild rice harvesting areas and other areas of significance to the WLON. Following a lengthy negotiation between WLON and Ontario a settlement was reached in 2012 which included an apology to WLON and \$27 million in financial compensation being paid to WLON.

An on-site archaeological assessment of the proposed Treasury Metals Goliath Gold Project conducted by Boreal Heritage Consulting concluded that:

"The area of the proposed Goliath Gold Project does not exhibit archaeological potential therefore it is recommended that the location does not require further archaeological assessment".

Given the history of development in the immediate vicinity of the proposed mine site as well as the history of private ownership in the area; it is a reasonable assumption that any significant adverse impacts to Aboriginal rights in the area would have been experienced through these various previous developments. On-site Impacts to Aboriginal and treaty rights resulting from the development of the Goliath Gold Mine are expected to be low.

DD.3 ABORIGINAL COMMUNITIES CONTACTED

As identified by the Ministry of Northern Development and Mines (MNDM):

- Wabigoon Lake Ojibway Nation;
- Eagle Lake First Nation;
- Lac Seul First Nation;
- Wabauskang First Nation;
- Whitefish Bay First Nation;
- Grassy Narrows First Nation; and
- Métis Nation of Ontario.

At the direction of the Canadian Environmental Assessment (CEA) Agency:

- All of the communities identified above; and
- The Aboriginal People of Wabigoon.

Treasury Metals has also been in contact with other First Nations organizations relating to the Goliath Gold Project including:

- Sioux Lookout Area Aboriginal Management Board (SLAAMB);
 - Participation in Aboriginal Trades and Education Symposiums and workshops in Dryden, Thunder Bay and Sioux Lookout.
- Dryden Native Friendship Centre; and
 - Information provided relating to employment opportunities; and
 - Participation in National Aboriginal Day celebrations hosted by DNFC.
- Fort William First Nation;
 - Participation in Fort William First Nation Mining Conference in Thunder Bay in March 2012.
- Seven Generations Education Institute;
 - Presentation to Seven Generations students in Fort Frances- October 2014.

The interests from the above mentioned organizations have related primarily to employment and business opportunities with Treasury Metals or the mining sector generally and the education and training that will facilitate such opportunities.

DD.4 INFORMATION SHARING AND NOTIFICATION

Treasury Metals has been in contact with Wabigoon Lake Ojibway Nation, Eagle Lake First Nation, Lac Seul First Nation and the Métis Nation of Ontario for a number of years. All interactions with Aboriginal communities including correspondence, meetings, phone calls, and emails have been recorded in a Contact Log. The Contact Log for each specific Aboriginal community is included in the Appendices to this report.

Treasury contacted all Aboriginal communities identified by the MNDM and the CEA Agency by registered letter on June 5, 2013 to advise each community of Treasury's obligations to consult. An information package relating to the Goliath Gold Project was also provided at this time. Subsequently individual meetings with representatives of the Aboriginal communities have occurred. At all meetings, project updates have been provided as well information relating to employment and business opportunities.

Treasury has presented information about the Goliath project through direct project update presentations and ongoing correspondence and at all meetings with Aboriginal groups. Information provided has included:

- Maps showing the location of the project site;
- Schematics of proposed mine layout and existing infrastructure;
- Description of the size of the resource and anticipated operating life of the mine;
- Descriptions of mine processes;
- Employment and business opportunities;
- Education and training requirements for employment; and
- Project progress updates.

On June 3, 2014, Treasury Metals hosted a meeting in Dryden to which Wabigoon Lake Ojibway Nation was invited along with Eagle Lake First Nation, Lac Seul First Nation, Wabauskang First Nation, Whitefish Bay First Nation and Grassy Narrows First Nation.

Representatives of Wabigoon Lake Ojibway Nation, Eagle Lake, Lac Seul and Whitefish Bay First Nations participated in this meeting. Both Wabauskang and Grassy Narrows First Nation sent their regrets.

Treasury is open to hosting and attending similar such meetings at the request of aboriginal communities in the future.

DD.5 COMMUNITIES CONTACTED

DD.5.1 Wabigoon Lake Ojibway Nation

Wabigoon Lake Ojibway Nation (WLON) is the closest First Nation to the Goliath Gold site. It is located on the shores of Dinorwic Lake approximately 45 km east of Dryden, Ontario and approximately 25 km from the Site of the Goliath Gold Project (via highway 17/Wabigoon Lake Ojibway Nation Road).

The community is upstream from tributaries connecting the Goliath site to Wabigoon Lake. There is easy access between Dinorwic Lake and Wabigoon Lake allowing the residents of Wabigoon Lake Ojibway Nation unrestricted access into Wabigoon Lake for fishing and other traditional Aboriginal activities.

DD.5.1.1 Community Contact and Introduction

- Chief Ruben Cantin;
 - Prior to September 2013.
- Chief Paul Watts; and
 - After September 2013.
- Robert Parenteau;
 - Mining Coordinator.

Owing to the proximity of WLON to the Goliath site, communication between Treasury Metals and WLON has been ongoing for a number of years. Treasury has a history of contact with WLON dating back to 2008. Over that period of time Treasury has provided information to WLON about Treasury's activities and plans as well as potential business opportunities associated with the Goliath project. Information relating to employment opportunities as well as qualifications required in order to be eligible for various jobs at the Goliath Project has been provided.

Treasury is of the belief that there can be benefits to WLON that may be realized with the development of the Goliath Gold Project and wishes to cooperate with WLON on matters of mutual interest and benefit.

WLON is the First Nation that is located closest to the Goliath Gold Project and logically the First Nation whose "Traditional Territory" encompasses the project area. As such, WLON is probably in the best position to identify potential adverse impacts arising from the project and most likely to be impacted by adverse impacts if those impacts do exist. Additionally, owing to the close proximity of WLON to the project, WLON is in the best position to participate in potential benefits arising from the project such as jobs and business opportunities arising from the project.

Information relating to Treasury's plans and activities has been provided to WLON by in person presentations and well as through correspondence. Treasury has maintained records of all interactions including:

- Presentations
- Correspondence
- Meeting notes
- Telephone conversations

- Emails exchanged

In a letter dated March 12, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDN to Chief Ruben Cantin of Wabigoon Lake Ojibway Nation, Wabigoon Lake Ojibway Nation was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

On June 5, 2013 a registered letter was sent by Treasury to WLON to outline the obligation of Treasury to consult with WLON relating to potential impacts that might result from the Goliath Gold Project and that might have the potential to affect WLON. An information package relating to the Goliath Gold Project was also provided at this time.

The most recent meeting between Treasury Metals and WLON Chief and Council occurred on January 20, 2014. At the January 20 meeting between Treasury Metals and Wabigoon Lake Ojibway Nation Treasury provided a power point presentation which included information in the following areas:

- An overview of Treasury Metals and the Goliath Gold Project;
- Project timelines;
- The EA process and project permitting requirements;
- Baseline studies;
- Aboriginal consultation requirements;
- Business opportunities associated with the Goliath Gold Project;
- Job opportunities associated with the Goliath Gold Project and qualifications required for employment;
- Recent developments - funding secured, work currently underway etc.
 - Hard copies of the presentation were left with meeting participants.

On April 10, 2014 Treasury provided copies of the following baseline reports to WLON:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment
- A summary of all contacts with WLON is included within the consultation logs.

DD.5.1.2 Concerns Raised by Wabigoon Lake Ojibway Nation

The concerns of Wabigoon Lake Ojibway Nation that have been made known to Treasury were identified in a letter dated June 27, 2013 from Chief Ruben Cantin to Norman Bush of Treasury Metals.

- Concerns identified include:
 - Gathering plants and berries;
 - Spring water quality;
 - Potential impact on hunting, fishing and trapping;
 - Once in a century flooding or weather-related disasters becoming more common because of human industrial activity;

- Potential cumulative loss of section 35 harvesting rights;
- Access restrictions/gated roads;
- Tailings ponds;
- How the land will be remediated in the final closure plan.

DD.5.1.2.1 Gathering of Country Foods

First Nations and other Aboriginal groups have not identified any specific plants or berries which may be negatively affected by the development of the Goliath Mine. Nor have any locations within the Goliath Project area from which plants and berries are being gathered been identified.

Treasury recognizes that the gathering of plants and berries by Aboriginal people is part of a traditional life style which continues to this day. However, it must also be recognized that while the gathering of plants and berries is a part of a traditional lifestyle, the presence of the plants and berries to be gathered is dependent on a wide variety of factors including:

- Forest ecotype
- Soil type
- Moisture regime
- Stage of forest development and succession
- Occurrence of late spring or early fall frosts
- Annual precipitation - particularly drought conditions or excessively high rainfall or hail
- Occurrence of forest fires
- Effects of forest insects

Consequently, although the gathering of plants and berries may be ongoing from year to year, the specific area where gathering may take place can change within a very short time.

Blueberries are one type of berry that is commonly picked in Northwestern Ontario. Blueberries are common to the boreal forest but not on all sites. Blueberries prefer the sandy or rocky soils normally associated with jack pine forests but may occasionally also be found on clay soils. Blueberries are an early succession species and thrive for a few years following disturbance such as fire or logging, but decline rapidly as the newly regenerating forest reaches crown closure. On clay sites which tend to support more deciduous growth, the presence of blueberries are even shorter lived. Generally the period in which blueberry crops proliferate on a site is approximately 4 to 6 years. Blueberries are also very dependent on an absence of late spring frost and rely on adequate sunshine and moisture during the June/July period to allow berries to mature. Consequently, even on ideal sites, and at the right stage of forest development, there is no guarantee that blueberries will be available.

It is not realistic to expect blueberry crops to be available for picking on the same specific location over an extended period of time. However, disturbance and change within the boreal forest is common and blueberry crops can usually be found at similar sites which are at an earlier stage of forest development. Such sites can frequently be found in close proximity to sites where blueberries have previously been picked.

No specific areas associated with the Goliath Mine Project have been identified as areas from which blueberries have been gathered. In consideration of the amount of private land associated with the Goliath project as well as the type and stage of forest development it is unlikely that many blueberries would have been picked on the proposed mine site. However, if there is a desire to pick blueberries, excellent picking opportunities exist very close to the project in areas recently logged just to the north of the Goliath Site and to the south of Lola Lake Nature Reserve. It is expected that blueberries will continue to be available on these harvested areas for the next few years. Future logging in this area will result in ongoing picking opportunity.

Other plant species may require different conditions to thrive than do blueberries, but virtually all plant species have particular conditions (eco-site and stage of forest development) under which their abundance is optimal and other conditions where they may be absent from the site.

An Ecological Screening Level Risk Assessment (SLRA) for the Goliath Mine Site has been conducted by Tetra Tech. This assessment evaluated potential impacts on country foods (such as berries) and identified mercury and lead as potential contaminants of concern. However, following further analysis the study concluded that "the results of the human health component of this SLRA indicated that the risk estimates did not exceed the acceptable threshold for both mercury and lead during the operational or post-closure phases of the mine".

The development of the Goliath Gold Site will not adversely impact the gathering of plants or berries within the general area.

DD.5.1.2.2 Spring Water

Although WLON has not identified specific springs which may be important to members of their community, Treasury is aware of a spring located on Hwy 72 just to the north of Dinorwic that is a popular source of drinking water. This spring is located approximately 12 km from WLON and it is likely a source of drinking water for members of this community.

This spring is located approximately 10 km from the Goliath Gold site. It is extremely unlikely that any activity on the Goliath site would impact this water source.

Considering that the location of this spring is in the ditch associated with Hwy. 72, the effects of road salt and other effects from passing traffic can be expected to have a far greater impact on this water source than any development associated with the Goliath Mine.

Another spring location that has been used in the past is located on the south side of Highway 17 just to the east of Blackwater Creek. It is Treasury's understanding that this spring has not been utilized as drinking water source for many years.

A Ground Water Monitoring Plan has been developed for the Goliath Gold Project by AMEC. This Monitoring Plan will identify any potential issues relating to ground water as the development of the mine progresses.

Treasury welcomes any additional information relating to the location of other springs that may be of interest or concern.

The development of the Goliath Gold site is not anticipated to adversely impact spring water sources that are used for drinking water. Ground water will be monitored during the life of the mine as per the Groundwater Monitoring Plan developed by AMEC.

DD.5.1.2.3 Hunting

There is provision with Treaty 3, that First Nations retain the right to hunt, fish and gather within the area of Treaty 3, specifically:

"Her Majesty further agrees with Her said Indians that they said Indians shall have the right to pursue their avocations of hunting and fishing throughout the tract surrendered as hereinafter described, subject to such regulations as may from time to time be made by her Government of Her Dominion of Canada and saving and excepting such tracts as may from time to time be required or taken up for settlement, mining, lumbering or other purposes by Her said Government of the Dominion of Canada, or by any of the subjects thereof duly authorized there for by the said Government".

Treasury acknowledges the right of First Nations and other Aboriginal groups to hunt fish and gather within the area of Treaty 3. However, no issues relating to hunting, fishing or gathering have been identified that are specific to the Goliath Gold Project.

The proposed Goliath Gold Project occupies a very small area within Treaty 3. The Project will occupy a total area of approximately 188 ha. In an effort to keep impacts to Treaty lands to an absolute minimum, Treasury has made a concerted effort to locate all possible mine infrastructure, including the processing plant and other mine buildings and the tailings treatment facilities on private property. Of the total area associated with the Goliath Project 55 ha it is anticipated to fall on Crown/Treaty lands. This represents a very small portion of the 142,450 square kilometers associated with Treaty 3.

An Ecological SLRA for the Goliath Mine Site has been conducted by Tetra Tech EBA. Four key receptors were assessed in the wildlife assessment including snowshoe hare, white-tailed deer, moose and ruffed grouse. Hazard Quotients (HQs) were calculated for selected wildlife receptors based on the ratio of estimated exposure to the toxicity reference value to evaluate potential risk from exposure to mine related contaminants of concern.

Based on the calculated HQs, estimated risks for wildlife were below risk thresholds for hare, deer and moose exposed to contaminants of concern during both the operational and post closure phase of the project. The HQ for lead was slightly above the risk threshold for grouse exposed to lead from the possible ingestion of tailings and food from the tailings during the operational phase of the mine, assuming grouse obtain at least half of their food from the tailings area. However this risk level falls below the risk threshold when the assumption is made that grouse obtain one third rather than one half of their food from plants and soil invertebrates living on the tailings. This is a more probable assumption.

In summary, the SLRA for the Project as conducted by Tetra Tech does not indicate that wildlife will be adversely affected by the Project.

No specifics of which animals are of interest for hunting by Aboriginal people have been provided. It must be remembered that the Goliath Gold site is situated within an area that has seen significant development. Development in close proximity to the Goliath Gold site includes the village of Wabigoon, Highway 17, the CPR tracks, the Trans-Canada pipeline right-of-way, a major electrical transmission line, several kilometers of gravel roads, private properties and homes etc. To the north of the proposed mine site are areas of mature forest mixed with areas of recent logging (within the past 5 - 10 years) and gravel roads associated with logging operations. Virtually the entire area has a history of development and utilization dating back for decades.

While there is wildlife present in the area, it can hardly be considered to be ideal habitat although the mix of open area and mature forest does provide for both cover and browse area for certain species especially to the north of the proposed mine site.

Additionally, as noted, the proposed mine site lies within an area that has a long history of private ownership. Consequently any past hunting on these properties would only have been possible with the permission of the landowner.

Wildlife populations and hunting opportunities in the vicinity of the proposed mine can be expected to remain much as they have in the past. If anything, the development of new logging roads on the Dryden Forest in the area to the north of the proposed mine site and south of the Lola Lake Nature reserve has increased hunting opportunity in recent years. In addition to the access provided by logging, the logging may also have improved habitat and enhanced populations of certain wildlife species through improvement to the mix of browse areas and cover presence.

Additionally as previously note, under Treasury's ownership, much of the former tree nursery is reverting to a natural forest condition and can be expected to contribute to the habitat of a variety of wildlife species. This will to a significant degree offset habitat impacted by the development of the Goliath Mine and associated infrastructure.

No specific values relative to hunting in the vicinity of the Goliath site have been identified. There are no known campsites in the immediate vicinity of the mine site and no specifically identified hunt zones/kill areas. The abundance of private land ownership in the vicinity has limited the areas where hunting has occurred.

The development of the Goliath Gold Project is not anticipated to adversely impact the rights of Aboriginal People to hunt within the general area. Treasury Metals has made a concerted effort to place mine infrastructure on private properties and thereby reduce potential impacts to Treaty Lands.

DD.5.1.2.4 Fishing

The proposed Goliath mine site does not include any lakes, rivers or significant streams that are suitable for fishing. There are a few small intermittent streams present which do support some baitfish but species fished for food or sport in the region are not present on the proposed mine site or in the immediate area.

Locations closest to the Goliath mine site that provides fishing opportunities are Wabigoon and Thunder Lakes. Wabigoon Lake support edible fish species including walleye, northern pike, sauger, yellow perch, lake whitefish, bass and crappie. Similarly, Thunder Lake supports populations of lake trout, walleye, northern pike and smallmouth bass. The fishery in Wabigoon and Thunder Lakes is significant to First Nations, Métis, and the general public.

The essential requirement to protect the fishery of Wabigoon and Thunder Lakes is to ensure that water quality in the lakes is not impaired. This is also of prime importance as the City of Dryden as well as numerous private homes along Thunder and Wabigoon Lakes draw drinking water from the lakes. Grassy Narrows First Nations which lies further downstream also relies on the Wabigoon River system for drinking water.

Treasury Metals is aware of the various Provincial requirements relating to water quality to be discharged from the Goliath Site and will implement measures to ensure these requirements are met.

Water will be discharged from the mine site into Blackwater Creek. Prior to discharge water will undergo a multi-stage treatment process to ensure that Provincial Water Quality Standards are met. Consequently, fish habitat and populations will not be adversely impacted.

Treatment processes will include:

- cyanide destruction
- advanced oxidation
- multimedia filtration
- reverse osmosis membrane filtration

Treasury is confident that the process to be implemented will ensure water quality in Thunder and Wabigoon Lakes is not adversely affected by the Goliath Gold Project. Consequently no adverse impacts to fish populations in Thunder or Wabigoon Lake are anticipated.

Similarly, the development of the Goliath mine site will not impact on lake levels on Wabigoon or Thunder Lakes. The water level in Wabigoon Lake is controlled by a dam located at the Domtar mill in Dryden and the level of Thunder Lake is controlled by a dam on Thunder Creek within the boundaries of Aaron Provincial Park.

As there is no existing opportunity to fish on the Goliath Gold Project site, the development of the project will not result in any on site impacts to fishing. Water treatment facilities will be constructed and operated by Treasury to ensure that the quality of water discharged from the site will meet Provincial requirements. With water treatment facilities in place, the ability to fish downstream from the Goliath site will not be adversely impacted.

A conceptual closure plan for the Goliath Gold Site has been developed. It is anticipated that a portion of the open pit will fill with water to create a small but very deep lake. Such a lake has the potential to support fish populations following closure of the Goliath Mine.

DD.5.1.2.5 Trapping

In Ontario, the opportunity to trap is controlled by the Ontario Ministry of Natural Resources through a system of registered trap lines. Every trapper on Crown land is assigned a specific trap line and given the exclusive rights for that area. Each trapper can then manage the furbearer resources on a long-term, sustainable basis.

Trapping on private land requires the permission of the landowner. Treasury Metals is not aware of permission being granted to trap on any of the private properties it has acquired in the vicinity of the Goliath Gold site.

Trapping on Crown lands in the vicinity of the Goliath site will not be altered as a result of the development of the Goliath Gold Mine.

DD.5.1.2.6 Once in a Century Flooding or Weather-related Disasters becoming more Common Due to Human Industry

Climate change is a complex subject with differing points of view on cause and effect, including the influence of human activity. Although there is general agreement that greenhouse gasses and other air emissions resulting from human industrial activities have been increasing since the industrial revolution, it is outside of Treasury's expertise to comment on any effects this may have on climate change.

Owing to the small size of the Goliath Mine Project and the relatively short period over which the mine is expected to be in operation, it is unlikely that the Goliath Mine Project in and of itself will have any impact on flooding or other weather related disasters.

Having said that, Treasury will adhere to all of the Federal and Provincial environmental permitting and greenhouse gas reporting requirements required.

The major potential for a significant flooding incident associated with the Goliath Gold Project would be through a failure of the Tailings Storage Facility. With that in mind, the Tailings Storage Facility will be designed and built in anticipation of a once in a thousand year rainfall event.

An analysis of the potential for a TSF failure has been conducted and is included in the Risk Assessment section of the EIS. With appropriate design and operation of the TSF, failure of the TSF is considered to be highly unlikely.

Treasury Metals does recognize the potential for infrequent weather related incidents such as flooding. With that in mind, the Tailings Storage Facility will be designed and built in anticipation of a once in a thousand year rainfall event.

Additionally, Treasury will incorporate technologies into the Goliath Processing plant to ensure that air emissions from the plant meet Provincial and Federal regulatory requirements.

DD.5.1.2.7 Access Restrictions/Gated Roads

The majority of roads in Ontario are open to the public. Exceptions to this are generally associated with private property or in some cases access is restricted for safety or security reasons. For safety and security reasons, it is anticipated that access to the Goliath Mine site will be restricted and gated as required. As the Goliath site is located the end of existing roads that do not provide significant access to locations beyond the immediate Goliath site, the impact on access to Treaty 3 lands will be small.

Treasury has received some individual requests from persons wishing to trap minnows in the ponds adjacent to the Treasury offices. These ponds were created by the damming of a creek flowing past the former OMNRF Tree Nursery for the purpose of providing irrigation water to the tree nursery. In all cases, access to these ponds to trap minnows has been provided during business hours.

Treasury does not anticipate implementing any measures to facilitate public access beyond the Goliath site. However, if there are specific requirements for access beyond the site, such requirements will be considered on a case by case basis.

DD.5.1.2.8 Tailings Storage Facility

Tailing ponds, also known as tailings storage facilities (TSF) are areas of mining tailings where the waterborne tailings material is pumped into a pond to allow the sedimentation separation of solid particles from the water. TSFs are generally impounded with a dam.

Treasury has evaluated a number of TSF designs and locations. The preferred location for the TSF is on private property purchased by Treasury Metals. By locating the TSF on a property that has been privately owned for many years, the use of Crown lands to which Treaty rights apply is avoided. The final design will be consistent with industry standards and regulatory requirements.

Treasury anticipates that offsite impacts resulting from the Goliath Project will be small. Water used in the extraction process will pass through a tailings pond, a water treatment facility, and a polishing pond before discharging from the site. Discharge water will meet all Provincial requirements for water quality and will not impair the water quality of area lakes or streams. Similarly, groundwater quality is not anticipated to be negatively affected by the Goliath Project.

The major potential for a significant adverse impact related to the TSF at the Goliath site would be as a result of a very heavy rainfall event that might lead to a breaching of the TSF. With that in mind the Tailings Storage Facility will be designed and built in anticipation of a once in a thousand year rainfall.

An analysis of the potential for a TSF failure has been conducted and is included in the Risk Assessment section of the EIS. With appropriate design and operation of the TSF, failure of the TSF is considered to be highly unlikely.

A Ground Water Monitoring Plan has been developed for the Gold Project by AMEC. This Monitoring Plan will identify any potential issues relating to ground water as development of the mine progresses.

DD.5.1.3 Closure Plan

Upon completion of mining activities, the Goliath site will be returned to a near natural state. Buildings and other infrastructure put in place to support mine operation will be dismantled and removed from the site. It is anticipated that a small lake will occupy the portion of the open pit that is not filled with waste rock. Topsoil set aside during mine construction will be returned to the site and the site will be re-vegetated with native plant species.

Long term site management to control negative impacts following mine closure is not anticipated.

A "Conceptual Closure Plan" is included with the Environmental Impact Statement. At this time the final closure plan associated with the Goliath Gold Project has not been completed. This will be developed prior to permit approvals. Any potential short-term or long-term issues associated with the mine development must be addressed to the satisfaction of the federal and provincial regulatory agencies prior to permits being issued. Community and Aboriginal consultations are an integral part of the mine closure plan process.

All jurisdictions in Canada require that closure plans are prepared and funds for the cleanup and reclamation are provided by the mining company before mining operations can begin. Mining companies are required to provide for financial assurance in the form of a deposit or bond to government as a guarantee that resources to meet mine closure requirements will be available.

DD.5.1.4 Additional Concerns Identified to the CEA Agency

Additional concerns from Wabigoon Lake Ojibway Nation were identified to the Canadian Environmental Assessment Agency in December of 2014. These concerns were subsequently forwarded by the CEA Agency to Treasury Metals on March 4, 2014.

Concerns identified to the CEA Agency include:

- Loss of access
- Noise pollution
- Dust/air pollution
- Water
- Property values
- Landfill
- Traditional Land Use Areas

DD.5.1.4.1 Loss of Access

"The large amount of land acquired by Treasury and the proposed gate has already and will continue to cut off access to land that has been traditionally used for activities such as hunting, minnow trapping, blueberry picking and camping".

The majority of the land acquired by Treasury has been the result of purchases from private individuals. These properties which have been purchased by Treasury at significant cost, have long been under private ownership.

Tree Nursery Road was constructed for the specific purpose of accessing the Dryden Tree Nursery and the road has been gated at the entrance to the Tree Nursery property throughout the period that the nursery was in operation. For security purposes, the road continues to be gated by Treasury Metals during non-business hours.

For safety and security reasons Treasury anticipates that access to the Goliath Site will be limited. At this time the point at which access will be restricted has not been specified. It is likely that restriction to the site will be in the vicinity of Norman Road.

To the north of Norman Road there is very little Crown land that is accessed by Tree Nursery Road. Most of the activities identified by WLON in this area would require the permission of the landowner.

There are no known campsites in this area.

Treasury does not anticipate implementing any measures to facilitate public access beyond the Goliath site. However, if there are specific requirements for access beyond the site, such requirements will be considered on a case by case basis.

"There is loss of access to recreational skidoo routes to Thunder Lake (and on to Ghost Lake and Mavis Lake) that have been used by our community for harvesting, fishing and recreation".

The specific location of recreational skidoos route to Thunder Lake has not been identified.

During the period that Treasury has been familiar with the Goliath site (since 2008), there has been no evidence of snowmobile travel across the proposed mine site. Treasury assumes that the most likely snowmobile route would be along the power line but land under the power line in this vicinity is privately owned. Treasury is not aware of any route between Wabigoon and Thunder Lake that does not involve the crossing of private property. Additionally, Treasury is not aware of a route onward from Thunder Lake to Mavis/Ghost Lake except via public roads or power lines.

Treasury is seeking more information relating to the location of a snowmobile route from Tree Nursery Road to Thunder Lake. Once the location of this route is determined, Treasury will investigate the possibility of establishing alternative routes that will safely bypass the proposed Goliath Gold site.

Development of the Goliath Mine will not have any impact on current access or uses of Ghost or Mavis Lakes.

Treasury does not wish to unduly impact established practices in the vicinity of the Goliath Site. Treasury is aware that snowmobile trails are frequently relocated to accommodate logging operations. As noted, once the location of the existing snowmobile trail is determined, Treasury will endeavor to work with interested parties to find a suitable alternative location.

DD.5.1.4.2 Noise Pollution

"The proposed mine location is approximately 3 km from the edge of the populated village of Wabigoon. (Cemetery Road). Noise from blasting and milling operations will affect nearby residents negatively."

"Aaron Provincial Park is roughly 2 km from the proposed mining site. The quiet, well-appointed park, abundant with wildlife boasts 80+ campsites, a number of which are rented by individuals on multi-year contracts. Aaron Park has the only public boat launch access to Thunder Lake, provides 2 well attended beaches, a picnic pavilion, and miles upon miles of trails that are used year round for walking, snowshoeing, & skiing. The park employs 5 full time seasonal employees, 3 of whom are summer students who gain environmentally related work experience that is highly recognized by Colleges and Universities. Significant round-the-clock noise from the mine will negatively impact the park's campers and could possibly result in the closure of the park altogether."

While Treasury is mindful of the potential impacts resulting from noise associated with the mine project, the proximity of the project to Highway 17 and the CPR mainline must also be considered. The majority of Aaron Park lies within 1/2 kilometer of both Highway 17 and the CPR. Existing noise levels in the park resulting from truck and rail traffic are anticipated to be substantially greater than noise resulting from the Goliath which is approximately 2.5 km from the Park.

A baseline study to determine pre-development sound levels in the vicinity of the proposed mine has been completed. Results of this study will be made available to interested First Nation communities.

Additionally, in response to a specific concern raised by a member of WLON and relating to noise associated with drilling on the Goliath site, Treasury initiated a noise level study within the Village of Wabigoon. Sound levels were monitored using long-term measurements taken continuously over a 24 hour period from April 22 to April 23, 2014. The measurements were taken at 3 separate locations, specifically within the Village of Wabigoon, 1/2 way between site and Wabigoon, and at property line of the site. Short-term measurements were collected from the diamond drill and heavy equipment at the site.

The consultant, RWDI, has concluded that "The predicted sound levels show the operation of the diamond drill and the dozer will at no time be audible over the sound levels in the community of Wabigoon".

A copy of the report prepared by RWDI has been provided to the individual involved and to Wabigoon Lake Ojibway Nation.

Measures to address noise levels resulting from the Goliath mine will be included in the EIS. Some measures being contemplated to minimize noise from the mine site include:

- retention of treed buffers between the mine site and residential areas
- full enclosure of mine processing buildings
- selection of mobile equipment with suitable sound suppression options
- scheduling of blasting to specific times so as to be as unobtrusive as possible

- material will be loaded into haul trucks in a manner that minimizes the drop height from the loader or excavator buck to the bed of the truck
- installation of rubber bedding material in truck beds is being investigated
- waste rock storage area and overburden piles will be situated to act as noise berms to Project

DD.5.1.4.3 Loss of Wildlife

"There several species of owls, an abundance of deer, fox, wolves, ducks, etc. that inhabit the area. At one time, a family of albino beaver lived in Blackwater Creek. Mine operations will obviously interfere with their natural habitat, and they will relocate. Noise from this mine will also drive away hunting opportunities (deer, moose, small game) which our community depends on for a source of food and income".

Baseline wildlife studies have also been completed. Results of baseline wildlife studies have been made available to interested First Nations.

Treasury Metals has acquired the former Dryden Tree Nursery which is in close proximity to the Goliath Gold Project and is making use of the offices and warehouses located on this site. The remainder of the property, including the many fields located on the property is being left to revert to a natural condition. These fields have now been out of use for approximately 15 years and the natural forest is beginning to encroach. As this site reverts to a natural condition, it will provide habitat suitable for a number of wildlife species and help offset habitat that may be disturbed by the development of the Goliath Project.

Adverse impacts to wildlife in the vicinity of the Goliath project are not anticipated. The measures note above to reduce noise for area residents will also serve to reduce noise levels experienced by wildlife.

DD.5.1.4.4 Dust/Air Pollution

"The village of Wabigoon has an estimated population of 500, with nearly all residents east of the proposed mine. Prevailing winds will put airborne debris, smoke, dust, odor, and toxins directly over those residents and their properties. Immediate concerns include health issues, contamination of gardens, and potential damage to vehicles, and or dwelling".

Treasury Metals will implement measures to control dust and air emissions originating from the Goliath site. A number of options for controlling dust and air emissions are being implemented and are outlined in the EIS. Some of those measures include:

- Surface drilling rigs will be equipped with dust suppression equipment, such as wet suppression or dry filtration systems.
- Equipment will be maintained to ensure optimum performance (working particulate filters etc.).
- Water and chemical dust suppressants will be utilized for dust control on haul roads.
- The ore crusher will incorporate dust suppression design.

Best management practices plan for dust control will be implemented on the site during construction phase though operations and closure.

DD.5.1.4.5 Water

"The residents of Wabigoon rely on drilled wells for access to safe drinking water. Some properties have shallow wells of less than 50 feet, while others have deep fractured wells in excess of 230 feet. Drilling, blasting, and deep pit excavating could affect the water table and render those drinking wells unusable. Leaching of mine waste could also contaminate the quality of drinking water. In addition, a large lakeshore population draws their drinking water from spring fed Thunder Lake and Wabigoon Lake. There is a reasonable concern that drilling, pit mining and leaching (as well as a disastrous breach of the damned "Post Mine Waste Water") could destroy the delicate

water resource that we all rely on. Both Thunder Lake and Wabigoon Lake support a large number of family homes, cottages & fishing camps. Even the City of Dryden draws its drinking water from Wabigoon Lake. Any contamination of this water resource is of great concern. A home without drinking water is a home that cannot be mortgaged or sold".

There are a number of potential impacts to water associated with a mining project. Some of those potential impacts can be related to:

- draining of water from the mine and mine site
- water that may trickle through mine waste and that may contain dissolved minerals, process chemicals and/or metals
- water used in the milling and ore extraction processes

The Goliath Gold project will utilize draining and collection systems to collect surface water from the site that will be used to support milling and ore extraction processes. Additionally water will be pumped from the mine itself for this purpose. Water will also be reclaimed from the tailings storage facility. Additional water that may be required will be sourced from the ponds adjacent to the Treasury Project Offices situated in the former Dryden Tree Nursery.

Water will be discharged from the mine site into Blackwater Creek. Prior to discharge water will undergo a multi-stage treatment process to ensure that Provincial Water Quality Standards are met. Consequently, fish habitat and populations will not be adversely impacted.

Treatment processes will include:

- cyanide destruction
- advanced oxidation
- multimedia filtration
- reverse osmosis membrane filtration

As water will not be sourced from Thunder Lake to operate the Goliath Gold Project and water from the Goliath Gold Project will not be released into Thunder Lake, no adverse impacts to Thunder Lake are anticipated.

Water will not be sourced from Wabigoon Lake to support the operation of the Goliath Gold Project. Water released from the Goliath Gold Mine will enter Creek and will ultimately find its way into Wabigoon Lake. As water will be treated prior to leaving the Goliath site so that federal and provincial water quality standards are achieved, no adverse impacts to the water quality of Wabigoon Lake are anticipated.

The development of the Goliath mine site will not impact on lake levels on Wabigoon Lake which are controlled by the dam at the Domtar mill in Dryden. Similarly the level of Thunder Lake is controlled by a dam on Thunder Creek located within Aaron Park.

Concerns have been identified relating to the potential effect on water quality and quantity in water wells.

Treasury Metals has committed to installation of a monitoring plan for groundwater resources in proximal distance to groundwater users in the local area. A Ground Water Monitoring Plan has been developed by Amec for the Goliath Gold Site. Treasury Metals will provide monitoring of groundwater quality and quantity throughout the life of the Project and continued until the TSF and WRSA are capped. Termination of the program will be expected following full review of data collection by regulatory authorities.

"Aside from drinking water, contamination would detrimentally affect:

- *Sport Fishing practices (Walleye Masters)*
- *Commercial Fishing (Tourist Camps)*
- *Income Potential (local employment as fishing guides)*

- *Recreational Fishing*
- *Local Food Source*".

Treasury Metals is aware of the various Provincial requirements relating to water quality to be discharged from the Goliath Site. As noted above, a number of measures to ensure that discharge water from the mine site meets the required standards are described in the EIS.

Treasury is confident that a suitable process can be implemented that will ensure that water quality downstream from the Goliath site will not be adversely affected by the Goliath Gold Project. Consequently no adverse impacts to downstream fish populations are anticipated.

"Released water from the mining process could negatively affect the water quality of Blackwater Creek. This watershed flows directly into Wabigoon Lake. Blackwater Creek is known for supporting baitfish and Sucker spawn. During high water years, these fish have been known to spawn as far up as the Tree Nursery & Norman Roads. Thunder Creek is nearby also, and could be contaminated with post mining water pollution. This is another spawning area for Sucker & Walleye. The mouth of Thunder Creek flows into Wabigoon Lake and this supports Musky and Northern Pike spawns".

Water discharged from the site will be treated to meet Provincial standards for water quality. Treatment processes are described in the EIS and include:

- cyanide destruction
- advanced oxidation
- multimedia filtration

Reverse osmosis membrane filtration *"Hughes Creek and Nugget Creek flow through this area as well. Nugget Creek is a fish sanctuary, and is a well-documented spawning area for Walleye, Northern Pike, Musky and Sucker. Wild rice is abundant in Nugget Creek. This is a traditional source of food and income for the Wabigoon Lake Ojibway Nation people".*

Water from the Goliath Mine will not be discharged into the Hughes Creek/Nugget Creek Watershed. Water quality and fish habitat in this watershed will not be impacted.

DD.5.1.4.6 Property Values

"Current market values of homes in Wabigoon may drop due to undesirable proximity to a mine site – especially if there are noise/air/water quality issues. Homes in nearby areas that could face water problems may encounter difficulties securing financing or resale opportunities as safe drinking water are usually a condition of a bank mortgage".

Treasury Metals will implement measures to control dust and noise originating from the Goliath site. Measures for controlling dust are outlined in the EIS. Similarly the processing plant will be designed with sound suppression in mind. Equipment to be used on site will also be selected with sound reduction being a major consideration. The sound associated with mine operation that will most likely be detectable will be as a result of blasting activities. In order to be as unobtrusive as possible, blasting will occur on a regular schedule at a time of day that will be as unobtrusive as possible.

DD.5.1.4.7 Landfill

"The Wabigoon Landfill site is nearing its end of use stage. Will Treasury Mine Industry speed up this timeline, forcing residents to travel to Dryden to deposit household garbage?"

Treasury Metals does not intend to use the Wabigoon Landfill as a waste disposal site. It is anticipated that waste that must be removed from the Goliath site will be trucked to the City of Dryden Landfill on Highway 502.

DD.5.1.4.8 Traditional Land Use Areas

"There are a few areas of spiritual, historical, and sustenance providing locations that are important to the people of Wabigoon Lake Ojibway Nation that are near the mine site. We lived in these areas, harvested, and laid our ancestors to rest there. These areas continue to be of great importance to us".

DD.5.1.4.8.1 Area Lakes

DD.5.1.4.8.1.1 Wabigoon Lake and Wabigoon Chain of Lake

Treasury Metals recognizes the significance and importance of the Wabigoon chain of lakes to Wabigoon Lake Ojibway Nation and others.

Treasury Metals is aware of the various Provincial Requirements relating to water quality to be discharged from the Goliath Site.

A number of measures to ensure that water released from the mine site meets the required standards will be implemented and are outlined in the EIS. Water treatment processes will include:

- cyanide destruction
- advanced oxidation
- multimedia filtration
- reverse osmosis membrane filtration

Treasury is confident that the process to be implemented will ensure that water quality in Wabigoon Lake will not be adversely affected by the Goliath Gold Project. Consequently no adverse impacts to fish populations in Wabigoon Lake are anticipated.

Similarly, the development of the Goliath mine site will not impact on lake levels on Wabigoon Lake which are controlled by the dam at the Domtar mill in Dryden.

DD.5.1.4.8.1.2 Thunder Lake and Thunder Creek

At its closest point the Goliath Mine Site lies slightly less than three kilometers from the shore of Thunder Lake. More than half of the shoreline of Thunder Lake is privately owned and has been developed for homes or cottages. A stretch of approximately 4 kilometers along the north eastern shore is the most contiguous part of the shoreline that is essentially free of development.

Owing to the close proximity of Thunder Lake to Wabigoon Lake, the connection that WLON has to Thunder Lake via Thunder Lake is logical. The usefulness of Thunder Creek as a canoe route has been diminished with the damming of Thunder Creek close to the outlet from Thunder Lake resulting in reduced water levels in Thunder Creek. Additionally, major crossings of Thunder Creek have been constructed for both the Mainline of the Canadian Pacific Railway and the Trans-Canada Highway.

There are no navigable streams flowing into Thunder Lake. Any historical use of Thunder Creek/Thunder Lake a canoe route would have required long portages above Thunder Lake.

Treasury Metals is aware of the proximity of the Goliath Gold site to Thunder Lake. The concerns raised by WLON are not unlike concerns raised by others, especially those with homes and cottages on Thunder Lake and in particular along East Thunder Lake Road. Treasury will implement a number of measures to reduce potential impacts to Thunder Lake including:

- leaving treed buffers between the Goliath Gold site and Thunder Lake
- ensuring mobile equipment has suitable sound suppression (mufflers)

- ensuring the processing plant is enclosed and insulated for sound suppression
- timing blasting to specific times
- implementing measures to control dust and air emissions

DD.5.1.4.8.1.2.1 Aaron Park

The Aaron Park brochure (City of Dryden website) states "Ancient Aboriginal Peoples used Thunder Lake as a historic food collection area and Thunder Creek as a canoe route. The types of food collected are not specified but it is reasonable to expect that fishing occurred in Thunder Lake and possibly hunting along the shores. Berries may also have picked in the area.

The Aaron Park Management Plan prepared by the Ontario Ministry of Natural Resources indicates that Aboriginal communities use the area in the vicinity of the park for hunting, trapping, fishing, gathering and travel. The park management plan goes on to state:

"Cultural resources include any significant resource or feature of archaeological, historical, cultural or traditional use. This may include archaeological resources, built heritage or cultural heritage landscapes. No cultural resources have been found in Aaron Provincial Park."

It is noteworthy that Aaron Provincial Park encompasses a significant portion of Thunder Creek which connects Thunder and Wabigoon Lake as well as a portion of the Thunder Lake shoreline.

Sites of cultural significance to Aboriginal people are most often located in close proximity to streams and shorelines. The fact that no cultural resources have been found within Aaron Provincial Park would make it even more unlikely that such resources would be located on the Goliath site which is further removed from this shoreline location.

Treasury Metals is aware of the proximity of Aaron Park to Thunder Lake. The measures noted above will also mitigate any potential impacts to Aaron Park arising from the development and operation of the Goliath Mine.

DD.5.1.4.8.1.3 Mavis Lake

Mavis Lake lies a few kilometers north of Thunder Lake and is approximately 7 km from the Goliath site. There is no development on Mavis Lake. A gravel road built in the 1950s to access cottage properties on Ghost Lake passes within 20 meters of the south shore of Mavis and provides access to the lake.

There is no water connection between Mavis and Thunder Lakes or Mavis Lake and the Goliath site.

There is no significant sport fishery in Mavis Lake with only small northern pike and perch present in the lake. Mavis Lake has been used as a baitfish lake since the 1950s by a non-aboriginal bait-fisherman.

Although not specified by WLON, it may be assumed that in times past, a route may have existed between Wabigoon Lake, Thunder Lake, Mavis Lake, Ghost Lake, and the wild rice gathering areas on Rice Lake. As there is no water connection between Mavis and Thunder Lakes, travel would have required lengthy overland portages between Thunder and Mavis Lake and Ghost and Rice Lake, with a shorter portage between Mavis and Ghost.

The development of the Goliath Gold Site will not impact Mavis Lake.

DD.5.1.4.8.1.4 Ghost Lake

Ghost Lake lies to the north of Thunder - approximately 8.5 km from the Goliath site. There is no water connection between Ghost Lake and Thunder or Ghost Lake and the Goliath site.

Close to 50 cottage lots were developed by the Ontario Department of Lands and Forest on the shores of Ghost Lake and sold during the 1950s. A gravel road was built to access the cottage lots on the south shore. A few

years later the lots on the north shore were accessed by road as well. Many of the cottages have now been converted to permanent year-round homes.

Historically, Ghost Lake has been known as a lake trout lake with a lesser fishery of northern pike and yellow perch. More recently (past 10 to 15 years) a significant bass population has appeared along with some walleye.

The development of the Goliath Gold Site will not impact Ghost Lake.

DD.5.1.4.8.1.5 Rice Lake

Rice Lake lies to the northwest of Thunder Lake and the Goliath Gold site and is approximately one kilometer to the north east of the Dryden Airport. Distance from the Goliath Gold site is approximately 12 km. There is no water connection between Rice Lake and Thunder Lake/Wabigoon Lake or Rice Lake and the Goliath site.

Rice Lake does have a significant wild rice resource that has historically been harvested by aboriginal people. A probable historical connection to Wabigoon Lake would have been via Thunder Creek across Thunder Lake, a portage from Thunder to Mavis, a portage from Mavis to Ghost and a portage from Ghost into Rice Lake.

The development of the Goliath Gold Site will not impact Rice Lake.

DD.5.1.4.8.1.6 Rock Lake

Rock Lake is situated off the south end of Dinorwic Lake, upstream from Wabigoon Lake Ojibway Nation and approximately 21 km south of the Goliath site. Rock Lake was for several decades (ending in the 1970s) the site of a major log dump used by the Dryden Paper Company. Logs were hauled by truck onto ice landings on Rock Lake during the winter months and then tugboats pulled log booms during the ice free period from Rock Lake through Dinorwic and Wabigoon Lakes to the pulp mill in Dryden.

As Rock Lake is some distance upstream from any potential discharge of water into Wabigoon Lake by the Goliath Gold Mine, it is very unlikely that there would be any impact to water quality in Rock Lake.

It is possible that fish may migrate between Wabigoon Lake and Rock Lake. Any potential impacts to fish in Wabigoon Lake could also impact the fishery in Rock Lake.

As water discharged from the Goliath site will be treated so as to meet all Provincial requirements prior reaching Wabigoon Lake, it is not anticipated that there will be any adverse impacts to fish populations and fishing in Wabigoon Lake or lakes connected to Wabigoon Lake resulting from the Goliath Gold Project.

DD.5.1.5 Tree Nursery and North of Present Wabigoon Landfill Site

The significance of the Tree Nursery to WLON is not clear.

The Dryden Tree Nursery was established by the Ontario Department of Lands and Forests (now Ministry of Natural Resources) around 1960 and operated until the late 1990s. The Nursery was then sold to a consortium of private tree growers who operated the nursery for a very short period. The facility then sat idle and empty for a number of years until purchased by Treasury Metals for office and warehousing in 2010.

Establishment of the Dryden Tree Nursery involved the clearing, leveling and installation of irrigation and drainage facilities on approximately 142 ha. Offices, warehouse facilities, and green houses were also constructed.

Development of the Tree Nursery also involved the damming of two creeks flowing into Thunder Lake to provide a supply of water for irrigation purposes. Ponds created by the damming of streams have resulted in habitat for baitfish. Local residents have been permitted by Treasury to trap minnows in these ponds.

Much of the work at the Dryden Tree Nursery was seasonal in nature. It is likely that members of WLON have been employed at the Tree Nursery.

At approximately the same time the Dryden Tree Nursery closed - Wabigoon Lake Ojibway Nation constructed and opened a tree seedling nursery at WLON which continues to operate. Nursery equipment that was on site at the former OMNRF Tree Nursery at the time the facility was purchased by Treasury Metals was offered to Wabigoon Lake Ojibway Nation at low or no cost. WLON did originally express an interest in this equipment but later declined the offer and this equipment was subsequently sold to another party.

Treasury will continue to utilize the offices and warehouse facilities of the former Dryden Tree Nursery throughout the life of the Goliath Gold Mine. The fields used for seedling production are no longer in use and are gradually reverting to forest cover. This area will provide new habitat for a variety of wildlife species. This transition back to nature will in part offset some of the area that must be disturbed during the establishment of the Goliath Gold Mine.

DD.5.1.5.1 North of the Present Wabigoon Landfill Site

The Wabigoon dump is accessed by Anderson road and lies approximately 2 km to the east of the Goliath Gold site.

The area to the north of the Wabigoon Dump is a part of the Dryden Forest, managed by the Dryden Forest Management Company. Recent developments (within last 5 years) north of the Dump include both road construction and logging activities. The recent logging in this area has resulted in excellent blueberry picking opportunities. Barring late frosts or other related weather related impacts, blueberry crops in this area can be expected for the next few years until trees regenerating in the harvest blocks reach the stage of crown closure.

Recent logging activity may also have improved habitat for some wildlife species by providing a mix of mature forest for cover and regenerating forest for browse. This may in turn have improved hunting opportunities. The presence of the Wabigoon Dump may also be contributing to the presence of certain wildlife species including black bear, bald eagle, skunks etc.

The area to the north of the Wabigoon Dump will not be developed as part of the Goliath Gold Project. With the exception of some possible exploration work, no activities are anticipated by Treasury in this area.

An undisturbed buffer (approximately 2 km wide) will remain between the Goliath Gold Site and the Wabigoon Dump.

Treasury Metals encourages Aboriginal communities to make any outstanding issues or concerns relating to the Goliath Gold Project known to Treasury Metals.

DD.5.2 Eagle Lake First Nation

DD.5.2.1 Community Contact and Introduction

- Chief Arnold Gardner;
- Jordan Gardner;
 - Lands and Resources Coordinator.

Eagle Lake First Nation is located on the northeast shore of Eagle Lake, approximately 25 km southwest of Dryden.

Travelling by road (Highway 17/Highway 594/Highway 502) Eagle Lake First Nation is located approximately 50 km from the site of the Goliath Gold Project.

Traditional travel between Eagle Lake and Wabigoon Lake would have required canoeing down the Eagle River to its junction with the Wabigoon River to the north of present day Waldof and then canoeing upstream along the Wabigoon River through present day Dryden and into Wabigoon Lake. Alternatively, it is likely that travel between

Eagle and Wabigoon Lakes utilized portages that linked Eagle and Wabigoon lakes through Dore, Trap and Mile Lakes.

Treasury Metals has had ongoing contact with Eagle Lake First Nation since 2009. Treasury has shared information about Treasury Metals and the Goliath Gold Project with Eagle Lake Chief and Council, Resource staff and with community elders. Treasury has also sponsored a "Mining Matters" seminar for Eagle Lake residents in August of 2012.

Treasury has met with Eagle Lake First Nation on a number of occasions. Meetings have primarily involved resource management staff and elders. Information relating to Treasury's plans and activities has been provided by means of both in person presentations and through correspondence. Treasury has maintained records of all interactions with Eagle Lake beginning on July 16, 2009.

A summary of Treasury's contacts with Eagle Lake can be in the consultation log.

In a letter dated March 12, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDN to Chief Arnold Gardner, Eagle Lake First Nation was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

On June 5, 2013 a registered letter was sent by Treasury to Eagle Lake First Nation to outline the obligation of Treasury to consult with Eagle Lake relating to aspects of the Goliath Gold Project that might have the potential to affect Eagle Lake First Nation. An information package relating to the Goliath Gold Project was also provided at this time.

Treasury met formally with the Chief and Council of Eagle Lake on September 19, 2013 and attended an employment forum at Eagle Lake on September 24, 2013.

At the September 19, 2013 meeting between Treasury Metals and Eagle Lake First Nation Treasury provided a power point presentation which included information in the following areas:

- An overview of Treasury Metals and the Goliath Gold Project;
- Project timelines;
- The EA process and project permitting requirements;
- Baseline studies;
- Aboriginal consultation requirements;
- Business opportunities associated with the Goliath Gold Project;
- Job opportunities associated with the Goliath Gold Project and qualifications required for employment;
- Recent developments - funding secured, work currently underway etc.
 - Hard copies of the presentation were left with meeting participants.

On April 10, 2014 Treasury provided copies of the following baseline reports to Eagle Lake First Nation:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment

Representatives of Eagle Lake First Nation participated in the June 3, 2014 meeting with other Treasury Metals and other First Nation communities.

Additionally, at the invitation of Eagle Lake, Treasury Metals participated in a community meeting at Eagle Lake First Nation on June 10, 2014 to share information with the community about the Goliath Gold Project.

DD.5.2.2 Concerns Raised by Eagle Lake First Nation

Eagle Lake has indicated the importance of maintaining Aboriginal and Treaty rights during the construction and operation of the Goliath Gold Mine Project.

No specific values associated the site or which may be impacted by the development of the Goliath Gold Project have been identified.

Presumably some the concerns identified by Wabigoon Lake Ojibway Nation may also be of concern to Eagle Lake.

Although Eagle Lake First Nation has not identified any specific concerns relating to the Goliath Gold Project, one member of Eagle Lake First Nation (currently living away from the community) has raised a number of points relating to the Goliath Gold Project Description. While correspondence from this individual have made it clear that the comments and questions provided are on behalf of that individual and not on behalf of Eagle Lake, the comments and questions posed are legitimate and those questions and Treasury's responses are included as follows:

Page 26 of the Executive Summary

"Although this may not be considered ELFN traditional lands, their members may be impacted by the operation of the mine".

Please provide rationale for this statement, was this confirmed through a detailed Traditional Knowledge Study and/or a Land Use Study?

Treasury does not have a definitive sense of the traditional lands of the various First Nation. We are aware that traditional areas of the various First Nations may overlap and at times members of different communities come together for various purposes. Perhaps this sentence was not worded as clearly as it could have been. The intent of the statement is not to define what is or is not traditional area but rather to recognize that Eagle Lake is relatively close to the project area and "may" have interests in the vicinity. It was pointed out to Treasury personnel that members of Eagle Lake First Nation have lived or are living in the Wabigoon area, in relatively close proximity to the project site. This has yet to be verified through a more formal process, hence the word "may" in the Project Description. Certainly one of the potential impacts considered is that the Goliath Gold site is close enough to Eagle Lake to provide employment opportunities to Eagle Lake residents. If there are any potential adverse impacts to Eagle Lake members associated with the Goliath Gold Project, Treasury is anxious to learn what those impacts might be.

A detailed Traditional Knowledge Study and/or Land Use Study has not been completed by Treasury. Nor have any such studies which may have been completed previously been provided to Treasury.

Page 14 of the Executive Summary and page 133 Section 5.3.15 of the Project Description.

Discusses Wabigoon Lake Ojibway Nation (WLO) wild rice harvesting areas. I assume that this information was provided by the OMNRF, were these sites confirmed with WLO and was Eagle Lake First Nation (ELFN) asked to provide any information regarding their traditional wild rice harvesting sites?

These wild rice harvesting areas have not been confirmed with WLO. Regardless of these areas being confirmed. Treasury is aware of the presence of wild rice in the areas identified and will take measures to ensure that these sites remain suitable for wild rice growth.

Eagle Lake, as well as the other First Nations with which Treasury is obliged to consult, was sent a letter by Treasury on January 28, 2014 requesting information related to Aboriginal values associated with wetlands. Information relating to wetlands which may have been used for wild rice harvesting was specifically requested. No responses were received.

Will WLON and ELFN be able to review a draft closure plan before a final is submitted to MNM for approval? Does WLON and ELFN fully understand the closure plan submission process including associated timelines leading to its approval?

WLON, ELFN and other First Nations will have the opportunity to review the draft closure plan. Information about the closure plan process will be provided.

- Some key points relating to closure plans:
 - Closure plans must be prepared and submitted to MNM prior to a mine being developed along with a closure plan, a bond must be posted in an amount deemed to be sufficient to provide for the closure of the mine. Posting of such a bond ensures that there are sufficient funds available to provide for mine closure in the event that the company operating the mine becomes insolvent.

"If the blasted rock is found to be acid generating it will be placed in the WRSA as the initial phase of waste rock storage". (pg. 43).

What other contingency measures is Treasury Metals proposing to ensure acid rock generating materials are contained?

Rock samples at the Goliath site are still in the process of being sampled and analyzed to determine the potential to be acid generating. Once this analysis is completed, options for containment will be evaluated. Treasury will provide additional information relating to the potential for rock to be acid generating and proposed containment and control measures if such measures are necessary after analysis is completed. Any measures that Treasury proposes to deal with potential acid generating rock will be reviewed and approved by government agencies prior to its permit to operate is issued.

Additional Note:

- Analysis has determined that waste rock has been determined to be potentially acid generating over time. Measures to address this concern are included in the EIS. Some key measures include: returning waste rock to the pit and allowing the pit to fill with water. The water cover will prevent acid from forming.
- Capping waste rock piles with an impermeable layer and covering with topsoil removed from the site and stored at time of mine construction. Such capping will prevent acid from generating.

DD.5.2.2.1 Project Construction

"At this time, the dam will cut off any natural water flow from the Blackwater Creek Tributary #2". (pg. 45).

Has this dam structure been clearly communicated to WLON members, with an opportunity to provide feedback and mitigation measures?

The dam structure referred to relates to the Tailings Storage Facility. A number of alternatives are being considered and evaluated for the Tailings Storage Facility. Opportunities for additional discussion with WLON and others relating to the design of the TSF will be provided as more detail relating to the various options becomes available.

Additional Note:

- The preferred location for the Tailings Storage Facility (TSF) is located to the east of tree nursery road on a privately owned parcel of land that Treasury has purchased. A preliminary design for the TSF has been developed by WSP and is included in the EIS.

DD.5.2.2.2 Production and Operations

"All precautions will be taken as per industry standards or better in regards to storage, handling and destruction of Cyanide. These will be detailed in a Cyanide Management Plan". (pg. 49).

Please provide a copy of the Cyanide Management Plan when it becomes available.

DD.5.2.2.3 Tailings Storage Facility

Was any of the said tailing storage facility options discussed with First Nations in detail, with opportunity to comment and provide possible mitigation measures in the event of disturbed areas of cultural significance?

This is still a work in progress. Opportunities for discussion and comment will be provided.

Additional Note:

- The preferred location for the Tailings Storage Facility (TSF) is located to the east of tree nursery road on a privately owned parcel of land that Treasury has purchased. A preliminary design for the TSF has been developed by WSP and is included in the EIS.

DD.5.2.2.4 Geochemistry

"Treasury is currently undertaking additional geochemistry studies the results from this testing are currently not complete. Initial results are expected within the first quarter of 2013". (pg. 66).

Is this study complete? Have the documents been sent to WLON and ELFN along with the financial resources to complete a third party technical peer review of the document?

These studies have not yet been completed. Additional samples have recently been sent for analysis but the results are not yet back from the lab. Results will be shared when the reports are completed. Treasury is aware that the Canadian Environmental Assessment Agency has made funds available to Aboriginal communities for technical peer reviews of documents such as this. Treasury anticipates additional discussions with Aboriginal communities relating to how peer reviews are funded.

Additional Note:

- Analysis has now been completed and waste rock has been determined to be potentially acid generating over time. Measures to address this concern are included in the EIS.
- Some key measures include:
 - Returning waste rock to the pit and allowing the pit to fill with water. The water cover will prevent acid from forming.
 - Capping waste rock piles with an impermeable layer and covering with topsoil removed from the site and stored at time of mine construction. Such capping will prevent acid from generating.

DD.5.2.2.5 Hydrology

"There are a total of 4 water courses that drain the project site to Wabigoon Lake and Thunder Lake that have been identified as potential concerns". (pg. 77).

Please clarify the potential concerns that resulted in a significant upgrade of the water quality sampling program in 2012.

There were no potential concerns arising from the water quality sampling that began in 2010 that led to the "significant upgrade of water quality sampling in 2012". Perhaps a more appropriate way of stating this would be that there was a significant expansion of water quality sampling beginning in 2012. Beginning in 2012, water

quality samples from several additional locations have been collected and analyzed. Such locations were added as the probable locations for mine associated infrastructure have been more closely evaluated.

DD.5.2.3 Additional Concerns

"No other concerns regarding the project have been expressed to Treasury Metals from ELFN". (pg. 144).

Usually when no questions are being asked it means community members do not understand what is being presented, this would have been evident if Treasury Metals had conducted a Traditional Knowledge Study. To gauge a communities understanding of a project it is best to complete surveys with each community member to effectively identify information gaps and possible areas of community engagement opportunities.

Treasury would be willing to undertake some form of community survey but would ask the input and approval of Council or their designate prior to doing so.

DD.5.3 Lac Seul First Nation

DD.5.3.1 Community Contact and Introduction

- Chief Clifford Bull;
- Elizabeth Kejick;
 - Mining Liaison Economic Development.

Lac Seul First Nation lies on the shores of Lac Seul approximately 40 km from the community of Sioux Lookout and over 100 km by road from the Treasury Goliath Gold Project site.

Travelling by road (Highway 17/Highway 72/Highway 664), it is approximately 105 km from the community of Frenchman's Head on Lac Seul Reserve to the Goliath site.

Traditional travel between Lac Seul and the Goliath site would have been much more involved. There is no direct access by water between Lac Seul and the Goliath site. The most direct means of travelling from Lac Seul to the area of the Goliath site would have been upstream along the English River System via Lac Seul, Abram, and Minnitaki Lakes and then a long portage over the height of land into the Dinorwic and Wabigoon chain of lakes.

Treasury Metals has been in contact with Lac Seul since June of 2012. In addition to meeting with Band Council, Treasury has participated in Career Fairs at Lac Seul. A summary of all contacts with Lac Seul is found in the consultation logs.

In a letter dated March 12, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDN to Chief Clifford Bull, Lac Seul was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

On June 5, 2013 a registered letter was sent by Treasury to Lac Seul First Nation to outline the obligation of Treasury to consult with Lac Seul relating to potential impacts that might result from the Goliath Gold Project and that might have the potential to affect Lac Seul. An information package relating to the Goliath Gold Project was also provided at this time.

Treasury Metals met formally with the Council of Lac Seul at Lac Seul on July 29, 2013. Also participating in the meeting were Lac Seul's Mineral Liaison Officer and representatives of the Lac Seul Economic Development Committee. A representative of Obish Construction was also in attendance.

A power point presentation outlining the Goliath Project was presented by Norm Bush of Treasury Metals. This presentation included:

- An overview of Treasury Metals;
- An overview of Goliath Gold Project (location, infrastructure);
- Project targets;
- Proposed site layout;
- Project status;
- Activities planned for 2013;
- Projected timelines;
- Environmental assessment process and permitting;
- Factors to be considered in mine design;
- Socio-economic impacts and benefits.

On April 10, 2014 Treasury provided copies of the following baseline reports to Lac Seul:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment

DD.5.3.2 Concerns Raised by Lac Seul First Nation

The concerns raised by Lac Seul at the meeting of July 29, 2013 are summarized as follows:

- water quality
- closure plans
- business/employment opportunities
- consultation process
- site visit

Additionally, Lac Seul identified the importance of maintaining Aboriginal and Treaty rights during the construction and operation of the Goliath Gold Mine Project.

Lac Seul has also identified the importance of maintaining water quality in the English River/Lac Seul Watershed. Of particular concern was a potential option identified by Treasury to discharge water from the Goliath site into Hartman Lake. As Hartman Lake drains into the English River system and through Lac Seul, this was identified by Lac Seul as a concern.

Treasury has determined that water will not be discharged into Hartman Lake. Therefore, no impact on the English River/Lac Seul drainage basin is anticipated.

No other specific values associated the Goliath site or which may be impacted by the development of the Goliath Gold Project have been identified by Lac Seul First Nation.

Lac Seul has expressed a strong interest in potential employment and business opportunities associated with the Goliath Project.

Treasury Metals will keep Lac Seul advised of potential business and employment opportunities.

The most recent contact between Treasury Metals and Lac Seul First Nation was at the June 3, 2013 meeting hosted by Treasury Metals in Dryden. Members of Lac Seul Council along with representatives of their Economic Development office attended this meeting. A representative of Lac Seul also visited the Goliath site following this meeting.

DD.5.3.3 Agreements

DD.5.4 Wabauskang First Nation

DD.5.4.1 Community Contact and Introduction

- Chief Leslie Cameron;
 - Prior to May 2014.
- Chief Martine Petiquan;
 - Since May 2014;
 - Tania Cameron.
- Resource Technician.

Wabauskang First Nation lies on the shores of Wabauskang Lake approximately 38 km south of Ear Falls, Ontario.

Travelling by road (Highway 17 - Highway 105) Wabauskang First Nation is located approximately 135 km from the Goliath Gold site. Traditional travel between Wabauskang and the Goliath site would have been much more difficult. Wabauskang is not located on the Wabigoon River system. In order to travel between Wabauskang and Wabigoon Lake, it would have been necessary to canoe upstream through Perrault, Cedar and Cliff Lakes, and then follow the route through a series of smaller lakes and portages (Mystery, Evening, and Twilight) and then portage overland to reach the Wabigoon system at Clay Lake. From Clay Lake to Wabigoon Lake would still involve a long paddle upstream and portages around a number of rapids and waterfalls.

Although Wabauskang is located some distance from the Goliath Gold site, Treasury has been in contact with Wabauskang with respect to the Goliath Gold Project. Beginning in November of 2012, records have been maintained of all interactions with Wabauskang First Nation and can be found in summary form in consultation logs.

Additionally, a Wabauskang based contractor (Makoose Forest Products) has been a major supplier of the wooden core boxes required for the storage of drill core samples associated with Treasury's Goliath Project.

In a letter dated March 12, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDM to Chief Leslie Cameron, Wabauskang First Nation was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

On June 5, 2013 a registered letter was sent by Treasury to Wabauskang First Nation to outline the obligation of Treasury to consult with Wabauskang relating to potential impacts that might result from the Goliath Gold Project and that might have the potential to affect Wabauskang. An information package relating to the Goliath Gold Project was also provided at this time.

On September 10, 2013 representatives of Treasury Metals travelled to Wabauskang First Nation to meet with Chief and Council, Wabauskang staff members and youth representatives. A representative of Bimose Tribal Council and Chief Arnold Gardner of Eagle Lake First Nation also participated in the meeting.

A power point presentation outlining the Goliath Project was presented by Norm Bush of Treasury Metals. This presentation included:

- An overview of Treasury Metals;
- An overview of Goliath Gold Project (location, infrastructure);
- Project targets;
- Proposed site layout;
- Project status;
- Activities planned for 2013;
- Projected timelines;
- Environmental assessment process and permitting;
- Factors to be considered in mine design;
- Socio-economic impacts and benefits.
 - Paper copies of the presentation were left with meeting participants.

On October 29, 2013 representatives of Wabauskang First Nation visited the Goliath Gold site. Wabauskang representatives included council members, resource staff and youth representatives as well as an advisor from Bimose Tribal Council and Wabauskang's technical advisor from Arrowblade Consulting.

A presentation made by Treasury at this visit included:

- An overview of Treasury Metals;
- An overview of Goliath Gold Project (location, infrastructure);
- An overview of the geology and gold resource;
- An overview of project targets, proposed site layout, project status, activities planned for 2013 and projected timelines;
- An overview of the environmental assessment process, environmental studies undertaken, and permitting requirements;
- In the interests of time and because several of the Wabauskang representatives had already seen the sections of the presentation relating to economic and employment opportunities, this section of the presentation was not presented but was included in the paper copies of the presentation provided to meeting participants.

On April 10, 2014 Treasury provided copies of the following baseline reports to Wabauskang:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment

An additional meeting between Wabauskang First Nation and Treasury took place on April 30, 2014 at the Treasury Metals office. At this time Treasury provided Wabauskang with updates to progress made on the Goliath Project in 2014, including:

- Work being completed by Lycopodium relative to the design and evaluation of alternatives for the processing plant and related infrastructure;
- A new preferred location for the processing plant;

- The design of the tailings storage facility and various alternatives considered;
- Work being completed on the Environmental Impact statement;
- Treasury representatives met again with Wabauskang Chief and Council at Wabauskang on September 19, 2014. A project update was provided at that time.

DD.5.4.2 Concerns Identified by Wabauskang First Nation:

At the September 10, 2013 meeting between Treasury and Wabauskang held at Wabauskang, Wabauskang identified the following concerns:

- potential impacts on land and rights
- potential impacts on future generations
- potential impacts on water quality
- consultation process
- resources required for consultation
- grade 12 English requirement for employment at Treasury

The above noted concerns were identified in a general way. No specific impacts associated with the Goliath project were identified.

During their October 29, 2013 site to Treasury, Wabauskang representatives noted concerns with respect to:

- water quality
- need for assessment of land uses/traditional ecological knowledge
- potential for a collective approach for meeting with First Nation

As at the September 10, 2013 meeting concerns were raised in a general way with no specifics provided. Presumably some of the concerns raised by Wabigoon Lake Ojibway Nation may be similar to the concerns of Wabauskang.

DD.5.5 Naotkamegwanning (Whitefish Bay) First Nation

DD.5.5.1 Community Contacts and Introduction

- Chief Joyce White;
 - prior to November 2013.
- Chief Howard Kabestra;
 - since November 2013.
- Alex Tom;
 - Mineral Resources Liaison.

Naotkamegwanning First Nation is located on the east side of Lake of the Woods close to the community of Sioux Narrows. Travelling by road (Highway 17/Highway 71) Naotkamegwanning is located slightly more than 200 km from the proposed Treasury Metals Goliath Mine site (see map - Appendix 1).

As Naotkamegwanning is situated on Lake of the Woods, there is no direct link by water to the vicinity of the Goliath Site. Any traditional travel between Naotkamegwanning and the area near the Goliath site would have involved a complex series of lakes and portages to connect with Eagle Lake. Similar routes as used by aboriginal living in the Eagle Lake area would then have been used to reach the Wabigoon Lake area and the vicinity of the Goliath site.

Despite the distance between Naotkamegwaning and the Goliath site, Treasury is aware that Naotkamegwaning First Nation holds commercial fishing licenses on Thunder Lake and on Wabigoon Lake.

Treasury has been in contact with Naotkamegwaning since November of 2012.

Representatives of Naotkamegwaning visited the Goliath site on April 13, 2013. Additionally, Treasury representatives met formally with Chief and Council at Naotkamegwaning on July 25, 2013.

All contacts between Treasury Metals and Naotkamegwaning since November 2012 are summarized in the consultation logs.

DD.5.5.2 Information Provided to Naotkamegwaning First Nation

In a letter dated March 12, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDN to Chief Joyce White, Naotkamegwaning First Nation, was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

Treasury contacted Naotkamegwaning by registered letter on June 5, 2013 specifically to advise Naotkamegwaning of the stage of development of the proposed mine and to enquire if Naotkamegwaning wished to meet with Treasury to discuss potential negative impacts which might result. Treasury also indicated a willingness to discuss other aspects of the project that might be of interest to Naotkamegwaning. Face-to-face meetings were proposed at the convenience of Naotkamegwaning.

At a July 25, 2013 meeting at Naotkamegwaning, Treasury made a power point presentation providing the following:

- An overview of Treasury Metals and the Goliath Gold Project;
- Project timelines;
- The EA process and project permitting requirements;
- Baseline studies;
- Aboriginal consultation requirements;
- Business opportunities associated with the Goliath Gold Project;
- Job opportunities associated with the Goliath Gold Project and qualifications required for employment;
- Recent developments - funding secured, work currently underway etc.

Hard copies of the presentation were left with meeting participants.

On April 10, 2014 Treasury provided copies of the following baseline reports to Naotkamegwaning:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment

Naotkamegwaning First Nation participated in the June 3, 2014 meeting hosted by Treasury in Dryden. Chief Howard Kabestra, members of Council and resource staff attended this meeting on behalf of Naotkamegwaning.

Naotkamegwaning and Treasury met again at the Goliath Gold Site on September 25, 2014.

DD.5.5.3 Concerns Identified by Naotkamegwaning

At the July 25, 2013 meeting between Naotkamegwaning and Treasury, Naotkamegwaning identified the following concerns:

- water quality - particularly as it relates to fish habitat
- employment opportunities
- traditional protocols

Naotkamegwaning First Nation holds commercial fishing licenses on Thunder and Wabigoon Lakes and is seeking assurances that the development and operation of the Goliath Gold Mine will not adversely impact upon the fisheries of Thunder and Wabigoon Lakes.

Despite the proximity of the Goliath Gold Mine to Thunder Lake, the proposed mine is not anticipated to impact on the fishery of Thunder Lake. Water will not be drawn from Thunder Lake to support mine processes. Nor will water from the mine site be discharged directly or indirectly into Thunder Lake.

The proposed location for the discharge of treated water from the mine site will be a location on Blackwater Creek which flows into Wabigoon Lake. Treasury Metals is aware of the various Provincial requirements relating to water quality to be discharged from the Goliath Site. Measures to ensure that discharge water from the mine site meets the required standards are described in the EIS.

Prior to the discharge of water from the Goliath site into Blackwater Creek, treatment processes will include:

- cyanide destruction
- advanced oxidation
- multimedia filtration
- reverse osmosis membrane filtration

Similarly, the development of the Goliath mine site will not impact on lake levels on Wabigoon Lake which are controlled by the dam at the Domtar mill in Dryden or Thunder Lake which is controlled by a dam located on Thunder Creek in Aaron Park.

Treasury is confident that a suitable process can be implemented that will ensure that water quality downstream from the Goliath site will not be adversely affected by the Goliath Gold Project. Consequently no adverse impacts to downstream fish populations are anticipated.

DD.5.6 Grassy Narrows First Nation

DD.5.6.1 Community Contacts and Introduction

- Chief Simon Fobister;
 - prior to April 2014.
- Chief Roger Fobister Sr.;
 - since April 2014.
- Councilor Rudy Turtle.

Grassy Narrows First Nation is located 80 km to the northeast of Kenora. Travelling by Road (Highway 17 - Highway 671) Grassy Narrows is approximately 240 km from the Goliath Gold site.

Although Grassy Narrows is located a considerable distance from the site, this community is downstream from the Goliath site. As such, it is likely that in times past people living in the Grassy Narrows area would have travelled upstream by canoe along the Wabigoon River system into Wabigoon and Dinorwic lakes and into the vicinity of

the Goliath site. However, since the Goliath site is located some distance from navigable waters it is unlikely that much if any time would have been spent on the actual Goliath site.

In a letter dated March 12, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDN to Chief Simon Fobister, Grassy Narrows First Nation was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

On June 5, 2013 Treasury contacted Grassy Narrows by registered letter to provide Grassy Narrows with an overview of the project and advise Grassy Narrows of the stage of development of the proposed mine. The letter also proposed a meeting between Grassy Narrows and Treasury to discuss potential negative impacts that might result from the Goliath Project. Treasury also indicated a willingness to discuss other aspects of the project which might be of interest to Grassy Narrows. A summary of Treasury's subsequent efforts to contact Grassy Narrows relating to the Goliath Project is included in the consultation logs.

Representatives of Treasury Metals travelled to Grassy Narrows to meet with the Chief and Council of Grassy Narrows on July 23, 2013. Although on arrival it was found that only a single councilor was available to meet with Treasury, Treasury did share information relating to the project and discussed concerns with the project as raised by Councilor Rudy Turtle.

For the July 23, 2013 meeting at Grassy Narrows a power point presentation outlining the Goliath Project had been prepared to present to the Chief and Council. As only Councilor Turtle was present, a printout of the presentation was reviewed with Councilor Turtle. The presentation included:

- An overview of Treasury Metals;
- An overview of Goliath Gold Project (location, infrastructure);
- Project targets;
- Proposed site layout;
- Project status;
- Activities planned for 2013;
- Projected timelines;
- Environmental assessment process and permitting;
- Factors to be considered in mine design;
- Socio-economic impacts and benefits;
 - Copies of the presentation were left with Councilor Turtle for distribution to other members of council.

On April 10, 2014 Treasury provided copies of the following baseline reports to Grassy Narrows:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment

A summary of communications between Grassy Narrows and Treasury beginning in November 2012 can be found in the consultation logs.

DD.5.6.2 Concerns Identified by Grassy Narrows First Nation

At the July 23, 2013 meeting with Treasury Metals, Councilor Turtle identified the following concerns relating to the Goliath Gold Project:

- Water quality in the Wabigoon River System;
- Employment opportunities at the Goliath site - specifically need for grade 12 education;
- Possible interest in economic development (business) opportunities.

The importance of maintaining Aboriginal and Treaty rights during the construction and operation of the Goliath Gold Mine Project was also identified.

The primary concern of Grassy Narrows with respect to the Goliath Gold Project relates to the potential for adverse effects to water quality in the Wabigoon River System resulting from the development of the project. During the 1960s and 1970s Grassy Narrows First Nation was adversely impacted by mercury contamination of the Wabigoon River that has been attributed to discharges from the pulp and paper mill in Dryden. Grassy Narrows is seeking assurances that mercury or other harmful substances from the Goliath mine will not be discharged into the river system.

No mercury is anticipated to be used at the Goliath Gold Site. Consequently, no mercury will be discharged into the Wabigoon River System.

Water treatment measures will also be implemented to ensure that other deleterious substances do not adversely impact the water system. Measures for water treatment that will ensure that discharges from the Goliath site meet Provincial water quality standards are identified in the Environmental Impact Statement and will include:

- cyanide destruction
- advanced oxidation
- multimedia filtration
- reverse osmosis membrane filtration

No other specific values associated the Goliath Gold Project or which may be impacted by the development of the Goliath Gold Project have been identified by Grassy Narrows.

DD.5.7 Métis Nation of Ontario

DD.5.7.1 Community Contacts

- Gary Lipinski;
 - President Métis Nation of Ontario.
- Theresa Stenlund;
 - Chair, Regional Consultation Committee.
- Joel Henley;
 - President, Kenora Métis Council.
- Marlene Davidson;
 - President Atikokan and Surrounding Area.
- Métis Council;
 - Clint Calder - President - Sunset Country Métis Council;
 - Alvina Cimon - President - Northwest Métis Council;
 - James Wager - MNO Region One Consultation Coordinator;

- o Dean McMahon - MNO Supervisor Lands and Resources.

The members of the Métis Nation of Ontario (MNO) do not live in a specific community but reside in various locations throughout the region. The regional office of the Northwest Métis Council is located in Dryden.

Treasury Metals has been in contact with the Métis Nation of Ontario with respect to the Goliath Gold Project since June of 2009.

Prior to submission of Treasury's Aboriginal Consultation Plan in July of 2013, two formal meetings had occurred between the Métis Nation of Ontario and Treasury Metals. These meetings occurred on October 11, 2012 in Kenora and on March 14, 2013 in Dryden.

Both meetings were attended by Regional Vice Presidents and staff of the MNO. The October 2012 meeting was primarily an introductory meeting at which Treasury Metals was presented information about the MNO including the history and culture of the MNO and their current organization. At the March 2013, the MNO presented Treasury a copy of a proposed Memorandum of Agreement (MOU) outlining the process for consultation with the MNO, the need for a Traditional Knowledge Study (TK Study), and a proposed budget associated with a TK Study and consultation as outlined in the proposed MOU.

DD.5.7.2 Information Provided to the Métis Nation of Ontario

In a letter dated March 13, 2013 from Gordon Mackay, Director of Mine Rehabilitation for MNDN to Alvina Cimon of the Northwest Métis Council, the Métis Nation of Ontario was advised that MNDM has received a Notice of Project Status (Notice) from Treasury Metals Incorporated (TMI) regarding Treasury's proposed Goliath Gold Project and Treasury's intention to bring the Goliath Gold Project into mine production.

Treasury contacted the MNO by registered letter on June 5, 2013 to advise the MNO of the stage of development of the proposed mine and to enquire if MNO wished to meet with Treasury to discuss potential impacts which might result. Treasury also indicated a willingness to discuss aspects of the project that might be of interest to the MNO. Meetings were proposed at the convenience of the MNO.

Subsequent discussions between the MNO and Treasury have included a meeting between Treasury and MNO staff at the Treasury offices on February 11, 2014 and a conference call with MNO staff on March 18, 2014.

On April 10, 2014 Treasury provided copies of the following baseline reports to WLON:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment
- Goliath Gold Project Baseline Noise Assessment
- Goliath Gold Project Stage 1, 2 Archeological Assessment

DD.5.7.3 Concerns identified by the Métis Nation of Ontario

The MNO have identified their rights to hunt, fish, and gather as values that are of concern to the MNO relating to the Goliath Gold Project. More specifically the MNO have indicated that it is not just the right to hunt fish and gather that is important but also the manner in which these activities are traditionally practiced in family groups that is of significance.

These rights have been identified in a general way. No specific values associated with the Goliath site have been identified.

DD.5.8 Aboriginal People of Wabigoon

DD.5.8.1 Community Contact

- Clayton Wetelainen;
 - President.

The Aboriginal People of Wabigoon (APW) is a non-profit corporation which represents the people who wish to be known as "the Wabigoon Métis Anishinaabe". This is a group of approximately 125 individuals. These individuals trace their ancestry to five Métis families with original ties to the Métis in the west who have intermarried with local aboriginals since relocating to the Wabigoon area around 1900.

The five original families associated with the Aboriginal People of Wabigoon have been identified as the Parenteau, Favelle, Maggrah, Garneau, and Mclvor families. Some of these names can also be found at Wabigoon Lake Ojibway Nation leading one to believe that there may be some overlaps between the Aboriginal People of Wabigoon and Wabigoon Lake Ojibway Nation. Evidence of such overlap is apparent by APW President Clayton Wetelainen also being a Band Councilor for Wabigoon Lake Ojibway Nation.

The status of the Aboriginal People of Wabigoon has not been officially recognized by the Ontario Ministry of Aboriginal Affairs. The APW were not included on the list of communities to be consulted with as provided to Treasury by the Ministry of Northern Development and Mines. The APW are included on Treasury's list of communities to consult with as a result of the Canadian Environmental Assessment Agency's inclusion of this group on the Federal government's required consultation list.

Having said that, the Aboriginal People of Wabigoon reside primarily within or in close proximity to the community of Wabigoon. Given their close proximity to the site of the proposed mine, Treasury welcomes their input with respect to potential impacts.

Although not associated with the Métis Nation of Ontario, The Aboriginal People of Wabigoon assert rights in much the same fashion as the Métis Nation of Ontario.

DD.5.8.2 Information Provided to the Aboriginal People of Wabigoon

Treasury contacted The Aboriginal People of Wabigoon by registered letter on June 5, 2013 specifically to advise the Aboriginal People of Wabigoon of the stage of development of the proposed mine and to enquire if the Aboriginal People of Wabigoon wished to meet with Treasury to discuss potential negative impacts which might result. Treasury also indicated a willingness to discuss other aspects of the project that might be of interest to the Aboriginal People of Wabigoon. Meetings were proposed at the convenience of the Aboriginal People of Wabigoon.

On April 10, 2014 Treasury provided copies of the following baseline reports to the Aboriginal People of Wabigoon:

- Goliath Gold Project Terrestrial Wildlife Study 2012 - 2013
- Goliath Gold Project Aquatic 2012 -2013 Baseline Study Report
- Goliath Gold Project Wetland Baseline Study 2013
- Goliath Gold Project Hydrology 2013 Baseline Study Report
- Goliath Gold Project Fisheries Baseline Data Summary 2012 -2013
- Goliath Gold Project Baseline Light Assessment

-
- Goliath Gold Project Baseline Noise Assessment
 - Goliath Gold Project Stage 1, 2 Archeological Assessment

A summary of all contacts between Treasury and the Aboriginal People of Wabigoon beginning in March of 2013 has been included in Appendix 9.

Specific direct contact with the Aboriginal People of Wabigoon has been limited, in part because the relationship between the Aboriginal People of Wabigoon and Wabigoon Lake Ojibway Nation has become blurred.

In September of 2013, the President of the Aboriginal People of Wabigoon was elected as a Band Councilor at Wabigoon Lake Ojibway Nation and consequently has been privy to all correspondence and interactions between Treasury and WLON.

To date, no specific concerns relating to the Goliath Gold development have been identified by the Aboriginal People of Wabigoon.

DD.6 NEXT STEPS IN ABORIGINAL CONSULTATION

- Continue to provide additional information about the Goliath Gold Project to interested FN and aboriginal communities as information becomes available.
- Implement Traditional Knowledge Studies with the Métis Nation of Ontario, Wabigoon Lake Ojibway Nation and Eagle Lake First Nation if desired by those communities.
- Continue to pursue mutually beneficial long-term agreements with interested First Nations and Aboriginal communities.
- Keep First Nations and Aboriginal communities informed of potential employment and business opportunities.

DD.6.1 Mitigation

- Inclusion of water treatment facilities in the design of the Goliath Gold Project to ensure that water released from the site meets Provincial water quality standards.
- Water treatment processes will include:
 - cyanide destruction
 - advanced oxidation
 - multimedia filtration
 - reverse osmosis membrane filtration
- Placement of infrastructure on private properties to the extent possible (processing plant, tailings storing facility).
- Allowing most of the former Dryden Tree Nursery (acquired by Treasury Metals in 2010 to revert to a natural condition - contributing to wildlife habitat an offsetting area disturbed by mine site development.
- Making best use of existing infrastructure:
 - Acquisition of former Dryden Tree Nursery by Treasury Metals for office and warehousing use of existing road systems to access the site vs construction of new roads to the property.
 - Following existing utility corridors rather than establishing new - e.g. natural gas to the site.
 - Making use of existing housing available in neighboring communities rather than building camp facilities at the proposed mine site - during both the construction and operational phases of the mine.

DD.7 ABORIGINAL CONSULTATION LOGS

DD.7.1 Wabigoon Lake Ojibway Nation

Wabigoon Lake Ojibway Nation - Engagement Log						
Date	Type	Aboriginal Group	Purpose	Key Issues Raised	Community Concern/Interest	Planned Follow-up
6-Feb-08	Meeting in Person	Wabigoon Lake Ojibway Nation	Provide project information	TML work program	TML introduced their work program and asked if there were concerns from WLON.	Map of property to be sent to community. Product list to TML
7-Feb-08	Email	Wabigoon Lake Ojibway Nation	Provide project information	Notes from meeting and action items. Project description, Work Program.		Complete Action Items

DD.7.9 Feedback from Aboriginal Communities provided by the CEA Agency to Treasury

Feedback from Aboriginal Communities provided by the CEA Agency to Treasury			
Aboriginal Group	Preliminary Feedback from Aboriginal Communities / Identified Concern	Response /Discussion / Proposed Mitigation	EIS Reference
Eagle Lake First Nation	<p>Water Quality</p> <ul style="list-style-type: none"> Figures showing delineation of potentially affected watersheds, including flow directions and the locations of discharge and recharge areas are needed Additional information on flow path of contaminants through watersheds, water quality within tailings storage facility (TSF) and open pit (post closure) is needed. This relates to wildlife access to the TSF and open pit Unclear how much water will be used daily and where it is sourced 	<p>The primary sources of water required for the Project will be water removed from the mine itself and water recycled from the TSF. Until the mine and TSF are developed to the stage that water may be sourced from these areas, water will be sourced from the ponds associated with the former OMNRF Tree Nursery. These ponds were created by the damming of streams flowing through the OMNRF Tree Nursery and used for irrigation purposes. These dams have remained in place and are operational.</p> <p>Additional information regarding water flow paths, volumes, contaminant handling, and water quality during various stages of the project can be found in several areas of the EIS per the references noted in the right hand column.</p>	<p>EIS Section 5.7 - Existing Conditions</p> <p>EIS Section 3.0 - Project Description</p> <p>Appendix F – Water Management Plan</p> <p>Appendix N – Surface Hydrology</p> <p>Appendix O – Hydraulic Modelling</p>
Eagle Lake First Nation	<p>Potential impacts to country foods, current use of lands and resources for traditional purposes, and cultural heritage in relation to present and future generations (cumulative effects)</p>	<p>A country foods assessment has been completed as part of the Risk Analysis for the Project. This assessment indicates that there is little chance of adverse impacts to country foods.</p> <p>Treasury is not aware of any current uses of the lands associated with the Project for traditional purposes. Any knowledge that Eagle Lake First Nation or any other party has relating to traditional uses of these lands would be welcomed by Treasury.</p> <p>An Archaeological Assessment of the Project area has been completed and has concluded that there are no sites of archaeological interest or significance associated with the site.</p>	<p>Appendix W – Screening Level Risk Assessment</p> <p>Appendix EE – Public and Aboriginal Land Use and Country Foods Assessment</p>
Eagle Lake First Nation	<p>Potential impacts to Lola Lake Nature Reserve, just to the north of proposed TSF</p>	<p>Lola Lake Nature Reserve is located 2 km. to the northeast of the project site and upstream from the project site. The area between the project site and Lola Lake Nature Reserve will not be developed as part of the Project. As such, the project is expected to have no impact on the Lola Lake reserve area.</p>	<p>Appendix J – Air Quality Assessment</p>
