EDL = Estimated Detection Limit
RDL = Reportable Detection Limit
TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.
WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch
N/A = Not Applicable
(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

EDL = Estimated Detection Limit
RDL = Reportable Detection Limit
TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.
WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch
N/A = Not Applicable
(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,

The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

N/A = Not Applicable

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

(2) ** Result taken from M1191208A run **

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	0.0°C
Package 2	-15.7°C
Package 3	-12.3°C
Package 4	-9.3°C

Sample KQF840 [19B-LNG-HEP-16] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQF862 [19B-LNG-HEP-21] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQF866 [19B-LNG-HEP-22] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQF867 [19B-LNG-HEP-23] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQF897 [19B-LNG-HEP-25] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQF899 [19B-LNG-HEP-26] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQF927 [19B-LNG-HEP-29] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQG114 [19B-VIL-HEP-18] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences that have caused suppression on recovery standard PCB194L.

Sample KQG146 [19B-VIL-HEP-25] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on reocvery standard PCB194L. No affect to native concentration

Sample KQG270 [19B-ARM-HEP-16] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQG271 [19B-ARM-HEP-17] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQG274 [19B-ARM-HEP-19] : Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

Sample KQG285 [19B-ARM-HEP-21] : PCB analysis: Results for PCB 188 to PCB 209 was obtained from 10x dilution, due to high Internal Standard Recoveries and the RDL was adjusted accordingly.

Sample KQG425 [19B-LNG-SOLE-12] : Duplicate results exceeded RPD acceptance criteria for some parameters. This may be due to sample heterogeneity.

Sample KQG594 [19B-VIL-SOLE-17] : Some Parameters in the duplicate results exceeded RPD acceptance criteria. This may be due to sample heterogeneity.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Some of the Internal standard Recoveries are outside method criteria, due to possible matrix interferences caused suppression on recovery standard PCB194L. No affect to native concentration.

(2) Recovery is outside control limits, possibly due to matrix effects

(3) Samples have more than 5x blank amount.

(4) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

			Matrix Spike		SPIKED BLANK		Method Blank		RPD	
QC Batch	Parameter	Date	% Recovery	QC Limits	% Recovery	QC Limits	Value	UNITS	Value (%)	QC Limits

(5) 13c-naphthalene used.

(6) Recovery cannot be calculated due to levels in sample. Possible sample heterogeneity.

(7) Possible sample homogeneity. Both sample and sample-dup anallysed at 10x dilution for possible matrix effects. No change in the results.

(8) Native recovery is above the method criteria, possibly due to matrix effects

(9) RT>2 seconds - PCDD/DF analysis-Peak maxima of monitored ions exceeds 2 seconds

(10) Recovery is outside method limits due to elevated background levels.

(11) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

(12) from 10x dilution

(13) ** From 10X Dilution **

(14) ** From 10X Dilution **EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

(15) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit. ** From 10X Dilution **

(16) ** Result taken from M1191208A run **

(17) Recovery is outside method limits, possibly due to high ambient levels.

(18) Possibly due to high ambient levels.

(19) Internal Recovery is above method criteria, due to matrix interferences

(20) Native recovery is above method criteria, due to matrix effect

(21) PCB analysis: Blank was found to contain numerous PCB congeners greater than the MDL possibly related to the matrix used.

(22) Native Recovery is above method criteria, due to matrix effects

(23) ** Some variation at trace levels **

(24) Recovery outside method acceptance criteria due to possible sample heterogeneity

(25) Recovery meets M1613 OPR criteria

(26) Recovery outside method acceptance criteria due to possible sample heterogeneity

(27) RT > 3 seconds - PCDD/DF analysis - Peak detected exceeds expected retention time (from internal standard) by greater than 3 seconds.RT>2 seconds - PCDD/DF analysis-Peak maxima of monitored ions exceeds 2 seconds

(28) Recovery exceeds method criteria possibly due to matrix effects

(29) Recovery exceeds method criteria

(30) Recovery exceeds method criteria due to matrix effects

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

<Original signed by>

Angel Guerrero, Team Leader, VOC Air

<Original signed by>

Branko Vrzic, A.SC.T., Senior Analyst, HRMS Services

<Original signed by>

Cathy Xu, Scientific Specialist, Ultra Trace Analysis, HRMS

<Original signed by>

Owen Cosby, BSc.C.Chem, Supervisor, HRMS Services

BV Labs has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

CERTIFICATE OF ANALYSIS – PARTIAL RESULTS

BV LABS JOB #: C056320
Received: 2020/09/04, 09:00

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

Encryption Key

Please direct all questions regarding this Certificate of Analysis to your Project Manager.
Nahed Amer, Customer Solutions Representative

==========
This report has been generated and distributed using a secure automated process.
BV Labs has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

QUALITY ASSURANCE REPORT(CONT'D)

			Spiked Blank		Method Blank		RPD		QC Standard	
QC Batch	Parameter	Date	% Recovery	QC Limits	Value	UNITS	Value (%)	QC Limits	% Recovery	QC Limits
A088467	Total (Wet Wt) Zirconium (Zr)	2020/11/24	97	80 - 120	<0.040	mg/kg				

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Reference outside acceptance criteria - re-analysis yields similar results.

(2) Reference outside acceptance criteria due to digestion limitation. (10% of analytes failure allowed).

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope

dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Sample(s) analyzed using methodologies that have not been subjected to Bureau Veritas Laboratories' standard validation process for the submitted matrix and is not an Accredited method. Analysis performed with client consent, however results should be viewed with discretion

GENERAL COMMENTS

For worksheets 6982339/696790/7055807:

Blank was found to contain numerous PCB congeners greater than the RDL. Glassware blank and proofing of materials and equipment used in the analysis of the PCB tissue samples were determined to be clean and not a contributor to the observed contamination. Please view results with caution.

A few native recoveries in the Spike were found to be above method criteria, due to the background in matrix used for blank and blank spike. No effect to sample results.

Sample NPZ235 [20LNG-HEP-31] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB188 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Sample NPZ257 [20LNG-HEP-32] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB188 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Sample NPZ291 [20LNG-HEP-44] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB179 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Sample NPZ292 [20LNG-HEP-45] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB179 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Results relate only to the items tested.

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report.

Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

Encryption Key

GENERAL COMMENTS

For worksheets 6982339/696790/7055807:

Blank was found to contain numerous PCB congeners greater than the RDL. Glassware blank and proofing of materials and equipment used in the analysis of the PCB tissue samples were determined to be clean and not a contributor to the observed contamination. Please view results with caution.

A few native recoveries in the Spike were found to be above method criteria, due to the background in matrix used for blank and blank spike. No effect to sample results.

Results relate only to the items tested.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

QUALITY ASSURANCE REPORT(CONT'D)

			Matrix Spike		SPIKED BLANK		Method Blank		RPD	
QC Batch	Parameter	Date	% Recovery	QC Limits	% Recovery	QC Limits	Value	UNITS	Value (%)	QC Limits
7209103	Pyrene	2021/02/24	122	50 - 150	121	60 - 140	0.099, RDL=0.49	ng/g	NC	50

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) 13c-naphthalene used.

(2) Value is below target of 1ng/g.

(3) Elevated ambient levels.

(4) 13c-Naphthalene used.

(5) Value is below target of 1 ng/g.

(6) Benzo(b)fluoranthene-d12 is corrected recovery for extra benzo(j)fluoranthene-d12 added to native spike mix.

(7) Below target of 1 ng/g.

(8) Amount is below target of 1ng/g.

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report.

Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Analysis was conducted according to Bureau Veritas Laboratories methods BRL SOP-00408 and BRL SOP-00409 and modified where applicable based on the sample matrix. This test is not Standards Council of Canada accredited for this matrix.

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

BV Labs - Partial/Rush Results

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

BV Labs - Partial/Rush Results

	UNITS	20LNG-HEP-33	EDL	RDL	TEF (2005 WHO)	TEQ(DL)	Isomers	QC Batch
C13-4-MonoCB-(3)	%	78						6982339
C13-DecaCB-(209)	%	97						6982339
C13-HexaCB-(156)+(157)	%	79						6982339

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,

The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

BV Labs - Partial/Rush Results

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

BV Labs - Partial/Rush Results

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

(1) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

BV Labs - Partial/Rush Results

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.
