EDL = Estimated Detection Limit

RDL = Reportable Detection Limit

TEF = Toxic Equivalency Factor, TEQ = Toxic Equivalency Quotient,
The Total Toxic Equivalency (TEQ) value reported is the sum of Toxic Equivalent Quotients for the congeners tested.

WHO(2005): The 2005 World Health Organization, Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds

QC Batch = Quality Control Batch

GENERAL COMMENTS

For worksheets 6982339/696790/7055807:

Blank was found to contain numerous PCB congeners greater than the RDL. Glassware blank and proofing of materials and equipment used in the analysis of the PCB tissue samples were determined to be clean and not a contributor to the observed contamination. Please view results with caution.

A few native recoveries in the Spike were found to be above method criteria, due to the background in matrix used for blank and blank spike. No effect to sample results.

Sample NPZ235 [20LNG-HEP-31] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB188 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Sample NPZ257 [20LNG-HEP-32] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB188 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Sample NPZ291 [20LNG-HEP-44] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB179 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Sample NPZ292 [20LNG-HEP-45] : PCB analysis:

Due to high internal interference, sample was diluted to 10x and RDL was adjusted accordingly. Results for natives PCB179 throughout PCB 209 are obtained from the dilution, including the internal recoveries

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

(2) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

(3) RT>2 seconds - PCDD/DF analysis-Peak maxima of monitored ions exceeds 2 seconds

(4) high internal recovery due to matrix effects

(5) high native recovery due to matrix effects

(6) Native recovery is outside method criteria, possible due to the matrix used

(7) Recovery outside method acceptance criteria due to matrix effects

GENERAL COMMENTS

For worksheets 6982339/696790/7055807:

Blank was found to contain numerous PCB congeners greater than the RDL. Glassware blank and proofing of materials and equipment used in the analysis of the PCB tissue samples were determined to be clean and not a contributor to the observed contamination. Please view results with caution.

A few native recoveries in the Spike were found to be above method criteria, due to the background in matrix used for blank and blank spike. No effect to sample results.

DIOXINS AND FURANS BY HRMS (TISSUE)

Dioxins/Furans in Tissue (1613B): The blank for worksheet batch 7166984 has trace positives that are below rdl. Results should be reviewed with caution.
Sample NPZ302 [20LNG-HEP-47] 2378TCDF Confirmation (M8290A/M1613): EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.
Sample NPZ305 [20LNG-HEP-50] 2378TCDF Confirmation (M8290A/M1613): RT>2 seconds - PCDD/DF analysis-Peak maxima of monitored ions exceeds 2 seconds

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) RT>2 seconds - PCDD/DF analysis-Peak maxima of monitored ions exceeds 2 seconds

(2) RT > 3 seconds - PCDD/DF analysis - Peak detected exceeds expected retention time (from internal standard) by greater than 3 seconds.RT>2 seconds - PCDD/DF analysis-Peak maxima of monitored ions exceeds 2 seconds

(3) EMPC / NDR - Peak detected does not meet ratio criteria and has resulted in an elevated detection limit.

(4) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

(5) RT > 3 seconds - PCDD/DF analysis - Peak detected exceeds expected retention time (from internal standard) by greater than 3 seconds.
