

## **Notice of intent to make a determination**

### **Caribou Street Culvert Replacement – Public Comments Invited**

September 19, 2019 – Indigenous Services Canada must determine whether the proposed Caribou Street Culvert Replacement, located in Rainy River First Nation is likely to cause significant adverse environmental effects. To help inform this determination, Indigenous Services Canada is inviting comments from the public respecting that determination.

Written comments must be submitted by October 19, 2019 to:

Aaron Pervais

Indigenous Services Canada, 100 Anemki Place, Suite 101

### **The Proposed Project**

This section of Caribou Street requires the replacement of a 3 metre x 36 metre long culvert. The existing culvert has signs of failure/collapse in 2 different areas. This road access allows members of the First Nation to access a secondary road that exits the community in case of any Emergency situations. This culvert is used for the main stream to flow into the Rainy River. The replacement of this culvert would last another 20 plus years.
