

Summary of Issues

Josephburg Condensate Fractionation Project

The Summary of Issues outlines the key issues that the Impact Assessment Agency of Canada (IAAC) considers relevant for the federal impact assessment process for the Josephburg Condensate Fractionation Project (the project). The proponent's response to the Summary of Issues will support decision-making by IAAC on whether a comprehensive impact assessment is required under section 16 of the *Impact Assessment Act*. If a comprehensive impact assessment is required, the key issues outlined below and the proponent's response will inform the scope of the impact assessment, and the development of the Tailored Impact Statement Guidelines and plans, as appropriate.

IAAC was informed by input from federal and provincial authorities, Indigenous groups, and the public received to date on the proponent's Summary of the Initial Project Description. The proponent is encouraged to read all submissions on the Canadian Impact Assessment Registry Internet site for the project (Reference Number [89634](#)).

The proponent is required to describe how it intends to address the key issues identified below as part of the development of its project. A high-level description is sufficient. Where relevant, the proponent is encouraged to identify if the key issues will be addressed through existing legislative and regulatory frameworks (i.e. legislation or regulation), by proponent commitments to best practices, policies or standards, or both.

Key issues

Indigenous and stakeholder engagement and consultation

- Clarify the process for meaningful engagement and consultation with Indigenous Peoples potentially affected by the project.
- Clarify the process regarding the assessment of the project's impact on rights of Indigenous Peoples.
